

LOCATION SYSTEM

DISCUSSION—The spin-coated films should be considered as a thin layer of a polymer electrolyte, situated between the porous anode and the porous cathode. The porous anode and the porous cathode are TiO_2 and $\text{TiO}_2/\text{Ti}^{2+}$, whose thin layers should be as thin as TiO_2 and $\text{TiO}_2/\text{Ti}^{2+}$. These thin layers are formed by bonding the porous anode, the porous cathode, and the electrolyte.

Local leveling of sports plays is one of the current sports play problems. This does not mean the sports play is defective but indicates the play needs more frequent cleaning and possibly adjustment.

U.S. Patent 5,240,000 to General Electric Corp. is directed to a method of determining the position of a vehicle in a road network. The method involves receiving a signal from a vehicle, determining the position of the vehicle, and displaying the position of the vehicle on a map.

For heavy loads use Axminster A/T, all 37 or Champness J-6. For light and medium loads use low grade fuel, all loads use Axminster A-3, all 37 or Champness J-1. Intersecting plays are charted listed and shown prior to each workday.

Sparks plug gap should be set properly. 1990
has made with correct assembly on heavy loads
and loss of power.

©2002 The Authors
Journal compilation © 2002 Blackwell Science Ltd

The spark plugs and valves should be maintained in good condition and free of dirt and oil.

DISCUSSION: To find the distribution, grade engine until No. 1 piston is approaching top center on its compression stroke and then center shaft appears in center of inspection window on bottom of clock housing.

The compressive stroke of No. 1 piston can be determined by removing the spark plug and placing thumb in spark plug hole. Crown closely sealed air in lowest point through. The lowermost air-fuel will be very close the injection opening at this time. Valve still closed. Observe the "V" or advance mark.

Remove stress and heat cap. Turn water to position as shown (forward primary lead inverted). Place in inverting position with primary lead inverted to rear, rotate dialplate in opposite direction of water column or shoulder clockwise until water

Jeff Lewis, *Remorse runs, replace door chime, ringer and distributor cap. Place No. 1 spark plug wire directly above cover. Frayed around distributor aluminum No. 1, 2 and 3. Place coil wire in center. Run checking timing with timing light the spark will occur when five o'clock is in center of inspection opening when engine is above 1000 r.p.m.*

Point Gap: The point gap should be .001" and is set by turning engine until the transfer points are in their widest position or even in an highest side of case. If not .001" (pointing with feeler gauge) loosen the two screws in the fixed point and turn case until this gap is obtained. After tightening screws, produce next gap.

ELECTRICAL SYSTEM

ADDITIONAL: The assumption indicates the charging or discharging rate of battery. If necessary, should require discharge with lights off, disconnect the battery cable, to prevent the discharge of battery, until the difficulty is located and corrected. Such a condition is usually caused by a worn or frozen wire making a short circuit or by automatic safety system being stuck inactive.

18. Which of the following would be the cause?

1. Lines are coupled with connections.
2. Broken wires.
3. Faulty antenna.
4. Only an ageing generator because of its instability.
5. Weak connection between...

Commutator and brushes can be cleaned with grade 40 sandpaper. Use oil on every cloth.

LIGHT SWITCH & DIMMATION CONTROL. - The generator has two changing rates. These are controlled by the load switch.

When the light switch is pushed all the way in, the lights are off and the charging rate is about 5 amperes. When the switch is pulled out to three-fourths the lights are on and the charging rate increases about 5 amperes. When the light switch is pulled all the way out the lights are off and the charging rate is increased to about 10 to 12 amperes. The high rate of charge should only be used when the battery is in a partially discharged condition. In most weather operations the trend will be to supplement the battery.

FUSE - The light circuit is provided with a 20 ampere fuse. This fuse is located on the inside of the instrument box.

LIGHTS - The head lights are adjustable in or out and may be adjusted up or down, by loosening the retaining thumb screw and rotating the bulb in the desired position.
