**Prediction** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Ocean Studies Board, Board on Atmospheric Sciences and Climate, Committee on Developing a U.S. Research Agenda to Advance Subseasonal to Seasonal Forecasting, 2016-08-22 As the nation's economic activities, security concerns and stewardship of natural resources become increasingly complex and globally interrelated, they become ever more sensitive to adverse impacts from weather, climate and other natural phenomena. For several decades, forecasts with lead times of a few days for weather and other environmental phenomena have yielded valuable information to improve decision making across all sectors of society. Developing the capability to forecast environmental conditions and disruptive events several weeks and months in advance could dramatically increase the value and benefit of environmental predictions, saving lives, protecting property, increasing economic vitality, protecting the environment and informing policy choices. Over the past decade, the ability to forecast weather and climate conditions on subseasonal to seasonal S2S timescales (i.e., two to fifty two weeks in advance) has improved substantially. Although significant progress has been made, much work remains to make S2S predictions skillful enough as well as optimally tailored and communicated to enable widespread use. Next Generation Earth System Predictions presents a ten year U.S. research agenda that increases the nation's S2S research and modeling capability, advances S2S forecasting and aids in decision making at medium and extended lead times.

**Extreme Weather and Global Media** Julia Leyda, Diane Negra, 2015-06-05 In the two decades bracketing the turn of the millennium, large scale weather disasters have been inevitably constructed as media events. As such, they challenge the meaning of concepts such as identity and citizenship for both locally affected populations and widespread spectator communities. This timely collection pinpoints the features of an often overlooked yet rapidly expanding category of global media and analyzes both its forms and functions. Specifically, contributors argue that the intense promotion and consumption of extreme weather events takes up the slack for the public conversations society is not having about the environment and the feeling of powerlessness that accompanies the realization that anthropogenic climate change has now reached a point of no return. Incorporating a range of case studies of extreme weather mediation in India, the UK, Germany, Sweden, the US and Japan, and exploring recent and ongoing disasters such as Superstorm Sandy, the Fukushima nuclear crisis, flooding in Germany and heat waves in the UK, Extreme Weather and Global Media generates valuable inquiry into the representational and social characteristics of the new culture of extreme weather.
