application server a product that lets e businesses roll out sophisticated Java based services to Web or wireless clients  
Written by the CEO and staff of ZeeWare Inc this incisive guide is packed with real world examples that show developers  
step by step how to prototype build and administer large complex WebLogic applications      **Advanced Enterprise  
JavaBeans Using WebLogic 6** David Herst, SkillBuilders, Incorporated, 2002-01-01      **BEA WebLogic Workshop** Joe  
Weber, Mark Wutka, 2003 BEA WebLogic Workshop is a rapid application development tool that makes building Java based  
Web service applications simple With just a basic foundation of Java programming you can use WebLogic Workshop to  
develop Web services BEA WebLogic Workshop Kick Start provides everything you need to get started with WebLogic  
Workshop including a quick Java primer and appendixes covering the essentials of XML SOAP and WSDL Learn the features  
of WebLogic Workshop and review hundreds of code examples and explore the inner workings of this new tool The book's CD  
ROM contains all the source code and examples from the book plus a 90 day trial version of BEA WebLogic Platform which  
includes WebLogic Workshop Foreword Web services have attracted much attention recently as the next big thing in  
computing technology Vendors of all shapes and sizes have announced their support for Web services technologies and every  
month a new Web services conference is popping up somewhere on the globe With all this hype and attention sometimes it's  
difficult to really discover what Web services are where they fit in your company what the business case is and how you can  
actually get started taking advantage of this technology BEA has been working with customers to answer many of these  
questions and provide solutions that enable companies to easily construct Web services that meet their needs today Contrary  
to the common conception of Web services as a consumer focused technology Web services may have the greatest potential  
as a technology inside enterprises as a new way of tying disparate applications together using standards based technologies  
To make Web services really work in the enterprise however it's essential that they meet core enterprise requirements Web  
services applications have to exist in a constantly changing IT environment where different applications are built and  
modified by different people on different schedules They must accommodate everything from modern J2EE based  
applications to legacy systems to applications at business partners They must be able to handle rich and complex information  
and transmit it between internal and external applications They must easily interact with other applications to leverage  
existing investments They must be robust reliable and they must perform Perhaps most important of all they have to be easy  
to build For Web services to flourish within an organization all developers will need to be able to build Web services that  
meet these requirements BEA WebLogic Workshop Kick Start introduces you to BEA's new WebLogic Workshop product a  
development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust  
enterprise features of the WebLogic J2EE application server WebLogic Workshop provides a graphical tool that makes it easy  
to visualize develop and test Web service applications and visual controls that dramatically simplify access to existing  
resources like databases packaged applications Enterprise Java Beans and other Web services The Workshop framework

provides out of the box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the public contract that a Web service offers to other applications. This makes Workshop Web services flexible in the face of a constantly changing IT environment. Workshop also provides built-in support for asynchronous messaging so that Web service applications can carry on rich two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious XML DOM programming. All of these capabilities can be accessed in a simple declarative fashion that enables all developers, not just J2EE experts, to get started building Web services today. Even if you are new to the Java programming language or have never built a J2EE application before, I think you will be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general and teach you the few Java and J2EE concepts you will need to know along the way. Rich with examples, this book illustrates the power of Web services and will help you realize the value they can bring to your company. Carl Sjogreen, Product Manager, WebLogic Workshop, BEA Systems Inc. [Enterprise Javabeans 3.0, 5E \(Covers Java Persistence\)](#) Bill Burke, Richard Monson, 2006-01-01. If you're up on the latest Java technologies, then you know that Enterprise JavaBeans EJB 3.0 is the hottest news in Java this year. In fact, EJB 3.0 is being hailed as the new standard of server-side business logic programming.
