Patterson,Jennifer Ricciuti,IBM Redbooks,2015-10-26 IBM WebSphere Application Server V8 5 includes a Liberty profile

which is a highly composable dynamic application server profile. It is designed for two specific use cases. Developers with a smaller production runtime and production environments. For developers it focuses on the tasks that a developer does most frequently and makes it possible for the developer to complete those tasks as quickly and as simply as possible. For production environments it provides a dynamic small footprint runtime to be able to maximize system resources. This IBM Redbooks publication targets administrators of Liberty environments. It provides the information needed to create, configure and manage Liberty servers. It includes information about managing multiple servers in an installation including the use of the new administrative capabilities introduced in WebSphere Application Server V8.5.5.7. [Data Management in a Connected World](#) Theo Härdter, Wolfgang Lehner, 2005-06-14. Data management systems play the most crucial role in building large application systems. Since modern applications are no longer single monolithic software blocks but highly flexible and configurable collections of cooperative services, the data management layer also has to adapt to these new requirements. Therefore within recent years data management systems have faced a tremendous shift from the central management of individual records in a transactional way to a platform for data integration, federation, search services and data analysis. This book addresses these new issues in the area of data management from multiple perspectives in the form of individual contributions and it outlines future challenges in the context of data management. These contributions are dedicated to Prof. em. Dr. Dr. Ing. E. h. Hartmut Wedekind on the occasion of his 70th birthday and were co-authored by some of his academic descendants. Prof. Wedekind is one of the most prominent figures of the database management community in Germany and he enjoys an excellent international reputation as well. Over the last 35 years he greatly contributed to making relational database technology a success. As far back as the early 1970s he covered as the first author in Germany the state of the art concerning the relational model and related issues in two widely used textbooks: *Datenbanksysteme I* and *Datenbanksysteme II*. Without him the idea of modeling complex structured real world scenarios in a relational way would be far less developed by now.
