Analog Computing Bernd Ullmann, 2026-06-13 Analog computing is one of the main pillars of Unconventional Computing. Almost forgotten for decades we now see an ever increasing interest in electronic analog computing because it offers a path to high performance and highly energy efficient computing. These characteristics are of great importance in a world where vast amounts of electric energy are consumed by today's computer systems. Analog computing can deliver efficient solutions to many computing problems ranging from general purpose analog computation to specialised systems like analog artificial neural networks. The book *Analog Computing* has established itself over the past decade as the standard textbook on the subject and has been substantially extended in this second edition which includes more than 300 additional bibliographical entries and has been expanded in many areas to include much greater detail. These enhancements will confirm this book's status as the leading work in the field. It covers the history of analog computing from the Antikythera Mechanism to recent electronic analog computers and uses a wide variety of worked examples to provide a comprehensive introduction to programming analog computers. It also describes hybrid computers, digital differential analysers, the simulation of analog computers, stochastic computers and provides a comprehensive treatment of classic and current analog computer applications. The last chapter looks into the promising future of analog computing.

Building in Security at Agile Speed James Ransome, Brook Schoenfield, 2021-04-20 Today's high speed and rapidly changing development environments demand equally high speed security practices. Still achieving security remains a human endeavor, a core part of designing, generating and verifying software. Dr James Ransome and Brook S E Schoenfield have built upon their previous works to explain that security starts with people; ultimately, humans generate software security. People collectively act through a particular and distinct set of methodologies, processes and technologies that the authors have brought together into a newly designed, holistic generic software development lifecycle facilitating software security at Agile DevOps speed. Eric S Yuan, Founder and CEO, Zoom Video Communications Inc. It is essential that we embrace a mantra that ensures security is baked in throughout any development process. Ransome and Schoenfield leverage their abundance of experience and knowledge to clearly define why and how we need to build this new model around an understanding that the human element is the ultimate key to success. Jennifer Sunshine Steffens, CEO of IOActive. Both practical and strategic, *Building in Security at Agile Speed* is an invaluable resource for change leaders committed to building secure software solutions in a world characterized by increasing threats.

and uncertainty Ransome and Schoenfield brilliantly demonstrate why creating robust software is a result of not only technical but deeply human elements of agile ways of working Jorgen Hesselberg author of *Unlocking Agility* and Cofounder of Comparative Agility The proliferation of open source components and distributed software services makes the principles detailed in *Building in Security at Agile Speed* more relevant than ever Incorporating the principles and detailed guidance in this book into your SDLC is a must for all software developers and IT organizations George K Tsantes CEO of Cyberphos former partner at Accenture and Principal at EY Detailing the people processes and technical aspects of software security *Building in Security at Agile Speed* emphasizes that the people element remains critical because software is developed managed and exploited by humans This book presents a step by step process for software security that uses today's technology operational business and development methods with a focus on best practice proven activities processes tools and metrics for any size or type of organization and development practice **General Technical Report NC** ,1998
