Beyond Risk Mitigation Class, 2024-05-28 Value management is described as a method used in the construction design process to identify or establish the value system of the client and it also serves to ensure that the client values are communicated and understood by the project team

Green 1991 Value Management VM evolved from Value Engineering VE which places significant emphasis on optimising the function of an asset in terms of lowest cost while the VM methodology consists of a number of steps which examine the functional requirements of the client through a process of analysis and then synthesises a suitable design that offers the best value and meets the functional requirements of the client

Thiry 1997 PMI 2015 This study endeavored to provide a clear distinction between VE and VM because these terms are mostly applied by different scholars interchangeably It is for this purpose that the researcher further emphasised that only VM was adopted for use in this study It is also asserted that Value Management is different from value Engineering in that VM is aimed at the optimisation of solutions in the establishment of suitable decision frameworks for the rest of the project which is achieved through the use of a structured decision model that originates in Multi Attribute Utility Theory

Green 1994 A project is a once off activity with one chance to achieve a satisfactory outcome and this necessitates the establishment of unambiguous objectives Value Management identifies the option which gives the best value for money in accordance with the set criteria
