## **Value Waste Construction Fidelis Emuze:**

**Value and Waste in Lean Construction** Fidelis A. Emuze, Tarcisio A. Saurin, 2015-11-06 Non value adding activities are otherwise known as waste in the lean construction lexicon. The aim of this collection is to build a common understanding of the role and contribution of value adding activities in achieving stipulated objectives and continuous improvement in construction projects and to contrast this with waste. Although the lean approach to construction projects has been widely covered, this is the first book that explicitly provides the link between value and waste in the Architecture Engineering and Construction AEC sector. This internationally researched collection seeks to create a paradigm shift which will shape work processes and future directions for how value is conceptualized and operationalized in both the project management and business aspects of construction. The readers will gain an understanding of the value adding paradigm in construction. How to make value supporting decisions. Waste identification and control in practice. With contributions from South Africa, Brazil, Norway and the USA, the implications of this book are globally relevant. This is essential reading for all higher level students of construction management and economics and all professionals interested in value management. *The Elgar Companion to the Built Environment and the Sustainable Development Goals* Alex Opoku, 2024-02-12 Exploring the link between Sustainable Development Goals (SDGs) and the built environment, this erudite Companion provides a comprehensive overview and critical examination of key topics and complex research issues. Structured around the 5Ps of the SDGs: people, planet, prosperity, peace, and partnerships, the Companion suggests potential routes for the future direction of research within this multidisciplinary field of study. [Handbook of Construction Safety, Health and Well-being in the Industry 4.0 Era](#) Patrick Manu, Gao Shang, Paulo Jorge Silva Bartolo, Valerie Francis, Anil Sawhney, 2023-05-12 This Handbook seeks to examine and advance current understanding of the confluence of construction health, safety and well-being and the broad range of Industry 4.0 technologies in use in the architecture, engineering and construction AEC industry. Globally, the construction sector accounts for more than 100 000 occupational fatalities annually. In many countries, reports of work-related accidents, injuries and illnesses are commonplace, and there is an urgent need to improve the occupational safety and health (OSH) outlook of the construction sector. The fourth industrial revolution presents opportunities to leverage modern technologies, e.g. big data, artificial intelligence, automation, sensors, AR, VR and robotics, to improve the poor OSH performance of the construction industry. However, embracing such technologies could also induce unintended adverse consequences for the safety, health and well-being of construction workers. Therefore, the realisation of the opportunities as well as the mitigation of potentially adverse consequences requires research-informed, holistic insights around the union of Industry 4.0 and construction occupational safety and health management. This cutting-edge volume addresses a significant gap in literature by bringing together experienced academics and researchers to highlight the drivers, opportunities and drawbacks of the merging of Industry 4.0 with construction health, safety and well-being. After a detailed introductory section which highlights

key issues and challenges section one covers the application of a broad range of digital technologies then section two discusses the application of industrial production and cyber physical systems in the context of construction safety and health management Readers from a broad range of AEC backgrounds as well as safety professionals and technologists will come to understand how the technologies are applied and the resulting OSH benefits as well as potential drawbacks
