[A Simple Guide to Retrieval Augmented Generation](#) Abhinav Kimothi,2025-07-01 Everything you need to know about Retrieval Augmented Generation in one human friendly guide Augmented Generation or RAG enhances an LLM s available data by adding context from an external knowledge base so it can answer accurately about proprietary content recent information and even live conversations RAG is powerful and with A Simple Guide to Retrieval Augmented Generation it s also easy to understand and implement In A Simple Guide to Retrieval Augmented Generation you ll learn The components of a RAG system How to create a RAG knowledge base The indexing and generation pipeline Evaluating a RAG system Advanced RAG strategies RAG tools technologies and frameworks A Simple Guide to Retrieval Augmented Generation gives an easy yet comprehensive introduction to RAG for AI beginners You ll go from basic RAG that uses indexing and generation pipelines to modular RAG and multimodal data from images spreadsheets and more About the Technology If you want to use a large language model to answer questions about your specific business you re out of luck The LLM probably knows nothing about it and may even make up a response Retrieval Augmented Generation is an approach that solves this class of problems The model first retrieves the most relevant pieces of information from your knowledge stores search index vector database or a set of

documents and then generates its answer using the user's prompt and the retrieved material as context. This avoids hallucination and lets you decide what it says.

***Artificial Intelligence in Architecture and the Built Environment*** Michal Sourek, 2025-01-22

Imagine if every architect had an apprentice who could consistently observe and understand their intentions, take over routine tasks, and monitor technical, environmental, and economic constraints. This apprentice would continually improve, freeing the architect to concentrate on truly creative work. This book outlines a plan to turn this vision into reality. It evaluates the development of artificial intelligence from its inception to the present, focusing on the last two decades of applying AI in architectural design and planning. The current state of architectural practice is also examined. Integrating architecture, computer science, AI, robotics, economics, law, neurobiology, and philosophy, the vision is built on three key premises: i) authentic, poetic creativity that transcends parameterization and algorithmizing; ii) innovative learning strategies and training approaches not yet applied concerning architectural design; and iii) the convergence of architecture's inherent spatiality with virtual reality technology and new theories of human thinking and intelligence, poised for implementation in machine learning.
