Frank, 1965 Carving Nature at Its Joints Joseph Keim Campbell, Michael O'Rourke, Matthew H. Slater, 2011-10-28

Reflections on the metaphysics and epistemology of classification from a distinguished group of philosophers Contemporary discussions of the success of science often invoke an ancient metaphor from Plato's Phaedrus successful theories should carve nature at its joints But is nature really jointed Are there natural kinds of things around which our theories cut The essays in this volume offer reflections by a distinguished group of philosophers on a series of intertwined issues in the metaphysics and epistemology of classification The contributors consider such topics as the relevance of natural kinds in inductive inference the role of natural kinds in natural laws the nature of fundamental properties the naturalness of boundaries the metaphysics and epistemology of biological kinds and the relevance of biological kinds to certain questions in ethics Carving Nature at Its Joints offers both breadth and thematic unity providing a sampling of state of the art work in contemporary analytic philosophy that will be of interest to a wide audience of scholars and students concerned with classification

The Philosophy of Nature Andreas Gerardus Maria van Melsen, 1953 **The Concept of Nature in Classical German Philosophy** Luis Felipe Garcia, 2024-11-18 Classical German Philosophy has traditionally been understood as the period in the history of ideas in which the investigation of the human mind takes precedence over the investigation of the natural world This assessment has a twofold consequence On the one hand the philosophy of the period has been praised for its contributions to our understanding of multiple expressions of human rationality such as history art and religion On the other hand such a philosophy has been criticized for its obscure speculations alien to the standards of modern scientific cognition The philosophy of nature developed at the time has been accordingly dismissed as a piece of outdated metaphysics Challenging this view the contributions collected in this book argue for the historical and contemporary relevance of the approaches to nature formulated at the time

Nature, the Soul, and God, 2nd Edition Jean W. Rioux, 2021-11-08 The full title of Newton's Principia is The Mathematical Principles of Natural Philosophy Sadly some contemporary philosophers might be hard pressed to say just what natural philosophy is about sadly because it remains foundational to questions arising in other disciplines metaphysics ethics philosophical psychology and the philosophy of god to name a few In Nature the Soul and God Jean Rioux has brought together primary readings in the philosophy of nature presenting ways in which philosophers conceive of and account for the natural world in a pre scientific reflection upon the way things are Its three main sections comprise a consideration of what the world would look like if natural philosophy were not possible some representative natural philosophies materialism formalism dualism and hylomorphism as well as an investigation into the implications these philosophies of nature have for other important questions such as human freedom and the immortality of the human soul Through the medium of philosophers both ancient and modern Rioux makes the point that one's philosophical account of the natural world will inevitably have an impact upon how one regards oneself and even things divine It all begins with nature

Indigenous Education and the Metaphysics of Presence Carl Mika, 2017-03-16 Indigenous Education and the Metaphysics of Presence A worlded philosophy explores a notion of education called worldedness that sits at the core of indigenous philosophy. This is the idea that any one thing is constituted by all others and is therefore educational to the extent that it is formational. A suggested opposite of this indigenous philosophy is the metaphysics of presence which describes the tendency in dominant Western philosophy to privilege presence over absence. This book compares these competing philosophies and argues that even though the metaphysics of presence and the formational notion of education are at odds with each other they also constitute each other from an indigenous worlded philosophical viewpoint. Drawing on both Maori and Western philosophies this book demonstrates how the metaphysics of presence is both related and opposed to the indigenous notion of worldedness. Mika explains that presence seeks to fragment things in the world underpins how indigenous peoples can represent things and prevents indigenous students, critics and scholars from reflecting on philosophical colonisation. However the metaphysics of presence from an indigenous perspective is constituted by all other things in the world and Mika argues that the indigenous student and critic can re-emphasise worldedness and destabilise presence through creative responses, humour and speculative thinking. This book concludes by positioning well-being within education because education comprises acts of worldedness and presence. This book will be of key interest to indigenous as well as non-indigenous academics, researchers and postgraduate students in the fields of philosophy of education, indigenous and Western philosophy, political strategy and post-colonial studies. It will also be relevant for those who are interested in philosophies of language, ontology, metaphysics and knowledge.
