## **Websphere Application Server 70 Administration Guide:**

**Identity Management Design Guide with IBM Tivoli Identity Manager** Axel Buecker, Dr. Werner Filip, Jaime Cordoba Palacios, Andy Parker, IBM Redbooks, 2009-11-06 Identity management is the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business. It is the process that enables business initiatives by efficiently managing the user life cycle including identity resource provisioning for people users and by integrating it into the required business processes. Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions. This IBM Redbooks publication provides an approach for designing an identity management solution with IBM Tivoli Identity Manager Version 5.1. Starting from the high level organizational viewpoint, we show how to define user registration and maintenance processes using the self registration and self care interfaces as well as the delegated administration capabilities. Using the integrated workflow, we automate the submission approval processes for identity management requests and with the automated user provisioning, we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention. This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure.

**IBM Intelligent Operations Center for Smarter Cities Administration Guide** Bhowmick Arundhati, Eduardo Francellino, Luis Glehn, Robert Lored, Pam Nesbitt, Shi Wei Yu, Sunil Mishra, IBM Redbooks, 2012-11-30 IBM defines a smarter city as one that makes optimal use of all available information to better understand and control its operations and optimize the use of resources. There is much information available from different sources. However, city officials often lack the holistic view of the city's operations that is required to respond to the citizens' needs in a timely manner and use the city resources wisely. IBM Intelligent Operations Center delivers a unified view of city agencies providing three primary elements for successful management of cities: use information, anticipate problems, and coordinate actions and resources. Chapter 1 of this IBM Redbooks publication introduces the IBM Intelligent Operations Center solution. The chapter provides a high level overview of its features, benefits, and architecture. This information is intended for city officials and IT architects that must understand the business value of IBM Intelligent Operations Center and its architecture. The remaining chapters of this book focus on information that helps IBM Intelligent Operations Center administrators perform daily administration tasks. This book describes commands and tools that IBM Intelligent Operations Center administrators must use to keep the solution running, troubleshoot and diagnose problems, and perform preventive maintenance. This book includes preferred practices, tips, and techniques and general suggestions for administrators of IBM Intelligent Operations Center on premises deployments. For related information about this topic, refer to the following IBM Redbooks publications: IBM Intelligent Operations Center for Smarter Cities Redpaper REDP 4939, IBM Intelligent Operations Center for Smarter Cities Solution Guide.

which is a highly composable dynamic application server profile. It is designed for two specific use cases: Developers with a smaller production runtime and production environments. For developers, it focuses on the tasks that a developer does most frequently and makes it possible for the developer to complete those tasks as quickly and as simply as possible. For production environments, it provides a dynamic small footprint runtime to be able to maximize system resources. This IBM Redbooks publication targets administrators of Liberty environments. It provides the information needed to create, configure, and manage Liberty servers. It includes information about managing multiple servers in an installation, including the use of the new administrative capabilities introduced in WebSphere Application Server V8.5.5.7. The following publications are companion publications for this book: WebSphere Application Server New Features in V8.5.5.7 (REDP 4870), WebSphere Application Server V8.5.5 Technical Overview (REDP 4855), IBM WebSphere Application Server V8.5 Concepts, Planning, and Design Guide (SG24 8022), WebSphere Application Server Liberty Profile Guide for Developers (SG24 8076).

**Data Management in a Connected World** Theo Härder, Wolfgang Lehner, 2005-06-14. Data management systems play the most crucial role in building large applications. Since modern applications are no longer single monolithic software blocks but highly flexible and configurable collections of cooperative services, the data management layer also has to adapt to these new requirements. Therefore, within recent years, data management systems have faced a tremendous shift from the central management of individual records in a transactional way to a platform for data integration, federation, search services, and data analysis. This book addresses these new issues in the area of data management from multiple perspectives in the form of individual contributions and outlines future challenges in the context of data management. These contributions are dedicated to Prof. Dr. Dr. Ing. E. h. Hartmut Wedekind on the occasion of his 70th birthday and were co-authored by some of his academic descendants. Prof. Wedekind is one of the most prominent figures of the database management community in Germany and he enjoys an excellent international reputation as well. Over the last 35 years, he greatly contributed to making relational database technology a success. As far back as the early 1970s, he covered, as the first author in Germany, the state of the art concerning the relational model and related issues in two widely used textbooks: *Datenbanksysteme I* and *Datenbanksysteme II*. Without him, the idea of modeling complex structured real-world scenarios in a relational way would be far less developed by now.
