Modeling and Analysis of Security Standards for Web Services

and Cloud Computing Ola Ajaj,2013 Cloud Computing is a new computing model consists of a large pool of hardware and software resources on remote datacenters that are accessed through the Internet Cloud Computing faces significant obstacles to its acceptance such as security virtualization and lack of standardization For Cloud standards there is a long debate about their role and more demands for Cloud standards are put on the table The Cloud standardization landscape is so ambiguous To model and analyze security standards for Cloud Computing and web services we have surveyed Cloud standards focusing more on the standards for security and we classified them by groups of interests Cloud Computing leverages a number of technologies such as Web 2.0 virtualization and Service Oriented Architecture SOA SOA uses web services to facilitate the creation of SOA systems by adopting different technologies despite their differences in formats and protocols Several committees such as W3C and OASIS are developing standards for web services their standards are rather complex and verbose We have expressed web services security standards as patterns to make it easy for designers and users to understand their key points We have written two patterns for two web services standards WS SecureConversation and WS Federation This completed an earlier work we have done on web services standards We showed relationships between web services security standards and used them to solve major Cloud security issues such as authorization and access control trust and identity management Close to web services we investigated Business Process Execution Language BPEL and we addressed security considerations in BPEL and how to enforce them To see how Cloud vendors look at web services standards we took Amazon Web Services AWS as a case study By reviewing AWS documentations web services security standards are barely mentioned We highlighted some areas where web services security standards could solve some AWS limitations and improve AWS security process Finally we studied the security guidance of two major Cloud developing organizations CSA and NIST Both missed the quality of attributes offered by web services security standards We expanded their work and added benefits of adopting web services security standards in securing the Cloud
