**A Global History of the Financial Crash of 2007-10** Johan A. Lybeck, 2011-10-13 We have just experienced the worst financial crash the world has seen since the Great Depression of the 1930s While real economies in general did not crash as they did in the 1930s the financial parts of the economy certainly did or at least came very close to doing so Hundreds of banks in the United States and Europe have been closed by their supervisory authorities forcibly merged with stronger partners nationalized or recapitalized with the tax payers money Banks and insurance companies had by mid 2010 already written off some 2000 billion dollars in credit write downs on loans and securities In this book Johan Lybeck draws on his experience as both an academic economist and a professional banker to present a detailed yet non technical analysis of the crash He describes how the crisis began in early 2007 explains why it happened and shows how it compares to earlier financial crises

**Accounting For Crises: A Marxist History Of American Accounting Theory, C.1929-2007** Rob Bryer, 2023-07-07 Historians have not convincingly explained modern capitalism's two major economic crises the Great Depression of the 1930s and the Global Financial Crisis GFC of 2008 2009 Accounting for Crises offers a new explanation why both began and were more severe in the USA America based on an accounting interpretation of Marx's theory of crises It explains their origins in capitalists control of accumulation which reveals important overlooked roles for Irving Fisher's accounting theory This theory by allowing discretion in accounts in the context of falling rates of profit encouraged swindling overstating reported profits and understating their risk which facilitated and aggravated both crises Framed by Fisher's theory during the 1920s American accounting theorists justified discretion which Creating the Big Mess the companion volume concluded it management used to conservatively smooth earnings Accounting for Crises shows that Fisher's theory also underlays the popular new theory of investment that justified valuing shares using reported earnings which encouraged their manipulation and legitimized speculation This it argues underlays America's exceptional late 1920s stock market boom the 1929 Great Crash and the depth and length of its Great Depression Prominently associated with the boom Fisher became unpopular after the crash his name disappearing from public debate Nevertheless the book concludes his theory hindered economic recovery weakened 1930s reforms undermined accounting regulation from the late 1930s and following his rehabilitation from the late 1950s underlies the Financial Accounting Standards Board's conceptual framework which by allowing off balance sheet accounting for securitization SPEs fostered the 2007 credit crunch that triggered the 2008 2009 Global Financial Crisis GFC

Alon,2015-11-28 The financial crisis was no doubt a recession and some would say a depression everyone wants to sugar coat it Academics want to nitpick and perform magic tricks with the numbers and say it was only a recession The reality is no one has seen this before It was clear the game has changed The old definition of what a recession was is no longer sufficient to express what happened But yet nothing has really changed Proof of this can be seen in how the financial world has handled the crisis The same old theories from the ivory tower are still in place But for the first time in a major way the theories aren t working anymore and people are noticing The Black hole is still there and money is being thrown into it A black hole gets larger as it is filled It s not over not by a long shot In this book we will cover ever so briefly the US financial crisis of 2008 **The Financial Crisis of 2008** Barrie A.
