Raphael Edinger, Sanjay Kaul, 2000-01-30 The liberalization of U.S. and European electric power markets presents a critical challenge for renewable sources of energy. Edinger and Kaul survey the technological state of the art and economic aspects of renewable electricity generation and outline the role of other renewable sources such as solar, wind and micro hydroelectric technologies. Offering an empirical and theoretical assessment of these technologies and their assets and liabilities, the book shows how it is possible to restructure our electric power systems and reorient them toward sustainable and environmentally friendly alternatives. International climate conferences such as those in Rio de Janeiro and Kyoto have proclaimed the need for environmentally hospitable technologies. A new electricity system based on renewable resources and small scale power technologies is needed badly. Their economics and other efficiencies over conventional central power generation with fossil fuels is clear. Edinger and Kaul assess the rewards and risks associated with renewable technologies and outline a feasible path toward a more environmentally friendly and reasonable use of limited natural resources and the global ecosystem. One promising approach for industrialized countries is the decentralization of our current public grid systems. This offers an opportunity for developing countries to leapfrog the stage of fossil fuel held responsible now for environmental pollution, resource depletion and possibly global climate change. The authors present theoretical analyses and empirical evidence to buttress their contentions mainly that electric power systems founded on renewable resources are vital prerequisites if we are to achieve the United Nations target of globally sustained development.

Renewable Energy

Opportunities and Issues on Federal Lands United States. Congress. House. Committee on Natural Resources.

Subcommittee on Energy and Mineral Resources, 2007 Electricity from Renewable Resources National Research Council, National Academy of Engineering, National Academy of Sciences, America's Energy Future Panel on Electricity from Renewable Resources, 2010-04-05 A component in the America's Energy Future study, Electricity from Renewable Resources examines the technical potential for electric power generation with alternative sources such as wind, solar, photovoltaic, geothermal, solar thermal, hydroelectric and other renewable sources. The book focuses on those renewable sources that show the most promise for initial commercial deployment within 10 years and will lead to a substantial impact on the U.S. energy system. A quantitative characterization of technologies this book lays out expectations of costs, performance and impacts as well as barriers and research and development needs. In addition to a principal focus on renewable energy technologies for power generation, the book addresses the challenges of incorporating such technologies into the power grid as well as potential improvements in the national electricity grid that could enable better and more extensive utilization of wind, solar, thermal, solar, photovoltaics and other renewable technologies.

Renewable Electricity United States. Congress. Senate.

Committee on Energy and Natural Resources, 2009 *The Power of Renewables* Chinese Academy of Engineering, Chinese Academy of Sciences, National Research Council, National Academy of Engineering, Policy and Global Affairs, Committee on U.S.-China Cooperation on Electricity from Renewable Resources, 2010-12-29 The United States and China are the world's

top two energy consumers and as of 2010 the two largest economies. Consequently they have a decisive role to play in the world's clean energy future. Both countries are also motivated by related goals namely diversified energy portfolios, job creation, energy security and pollution reduction, making renewable energy development an important strategy with wide ranging implications. Given the size of their energy markets any substantial progress the two countries make in advancing use of renewable energy will provide global benefits in terms of enhanced technological understanding, reduced costs through expanded deployment and reduced greenhouse gas GHG emissions relative to conventional generation from fossil fuels. Within this context the U.S. National Academies in collaboration with the Chinese Academy of Sciences CAS and Chinese Academy of Engineering CAE reviewed renewable energy development and deployment in the two countries to highlight prospects for collaboration across the research to deployment chain and to suggest strategies which would promote more rapid and economical attainment of renewable energy goals. Main findings and concerning renewable resource assessments, technology development, environmental impacts, market infrastructure among others are presented. Specific recommendations have been limited to those judged to be most likely to accelerate the pace of deployment, increase cost competitiveness or shape the future market for renewable energy. The recommendations presented here are also pragmatic and achievable.

Renewable Energy 1998: Issues and Trends, 1999 *Renewable Energy and International Law*

Chitzi C. Ogbumgbada, 2025-11-27. This book addresses the injustices associated with renewable energy development and use within the context of the energy transition. Primarily informed by a communitarian approach to energy justice, the book draws on the philosophical concept of African communitarianism as a guiding principle. This concept emphasises harmonious or communal relationships among members of a political and social community, making it easier to justify solutions to renewable energy injustices in contrast to an individualistic approach. The book argues that international law can facilitate this approach to energy justice by adapting existing norms, standards, practices and institutions. Adopting the unfair distribution of renewable energy benefits in the international community as a test case, the book contributes to existing energy justice scholarship by highlighting the significant contribution of non-Western philosophies in addressing renewable energy injustices. It also repositions international law as a tool for operationalising this approach to energy justice. The book will be of interest to researchers, policymakers, international governmental organisations and civil society.
