The Fish In The Room M. Ewee,2025-11-03 You built the killer case flawless logic sexy data slides that could win a corporate beauty pageant And what happened Your customer picked your competitor Or your boss chose his own recycled dusty idea from 2019 Then They explained it with the dumbest reasons you ve ever heard So of course you thought I was two seconds away from calling them complete idiots But here s the twist they weren t being stupid they just ordered for themselves and your dish wasn t on the menu This isn t a normal business book It s what happens when you take behavioral science neuroscience psychology and real business strategy and put them together to answer one simple question how do you actually make people say yes and take action And it s not theory or jargon it s explained with real situations you already know you your boss your customers that colleague whose bad ideas keep getting approved and the real moves entrepreneurs used to turn small ideas into companies everyone now thinks were always going to succeed Because here s the problem what they taught you in business school was expensive fiction Every MBA program every management textbook every consultant deck tells the same fairytale about decision making people spot a problem gather information weigh alternatives and then pick the optimal solution It sounds scientific It sounds professional But it s fantasy Real life doesn t work like that This book speaks neuroscience not business school fiction Your brain actually has two systems making decisions The first is the emotional side your ancient survival processor that s been keeping humans alive for millions of years It s insanely fast reacts in milliseconds and it operates completely outside your awareness It doesn t talk it doesn t do logic it just fires gut reactions based on feelings The second is the analytical side your slow deliberate articulate processor That s the voice in your head that sounds smart and professional It loves weighing options building arguments and writing long explanations for choices you already made Same brain two operating systems So picture it like this a giant ancient fish silent moving toward warm water away from danger following the group that s your emotional system Pure instinct Then picture a well dressed general articulate strategic making plans calculating incentives presenting frameworks speaking in full sentences about optimal outcomes That s your analytical system This whole book is your invitation to accept one uncomfortable truth humans don t buy spreadsheets And by spreadsheets I mean logic evidence numbers data all the rational firepower you thought would finally make them say yes Most of the time it doesn t Not your calculation Not your

competitive matrix Not that slide deck you redesigned seventeen times Because what actually decides is the fish not the general So here s what s coming where behavioral economics and psychology finally meet Monday morning business decisions Turn the page and you ll see why your last pitch really failed and why it had nothing to do with the quality of your logic

The Measure of Progress Diane Coyle, 2025-04 A book which explores how the digital transformation of the economy affects how we measure and interpret the true scale of innovation productivity and growth Statistics are an essential guide for better economic policies They also involve questions of freedom justice life and death as governments and increasingly machines use statistics to make decisions affecting people s lives This book argues that the conceptual framework underpinning today s economic statistics is out of date and makes it impossible to measure understand and respond to what is really happening in the economy According to Diane Coyle we have been interpreting the economy through the lens of a statistical framework developed in the mid twentieth century when a lack of goods and services rather than natural resources was the binding constraint on growth when the intangible value of intellectual property and digital assets were largely unaccounted for and when the most pressing economic policy challenge was managing demand rather than supply Today s challenges are vastly different Growth in living standards in the rich economies has slowed significantly in recent decades despite dramatic innovation in digital technologies The geopolitical as well as the environmental landscape is fraught and our belief in democracy increasingly strained In *The Measure of Progress* Diane Coyle comprehensively explores how the digital transformation affects how we measure the economy and our capacity to interpret the true scale of innovation productivity and growth Her book also sets out some key principles for improving measurement A true understanding of the economy she argues will require different data collected in a different framework of categories and definitions Only then will policymakers businesses and individuals be able to shape a better sustainable future
