of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low level Petri nets while on the other hand they still offer a wide range of analysis methods and tools The step from low level nets to high level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept In low level nets there is only one kind of token and this means that the state of a place is described by an integer and in many cases even by a boolean value In high level nets each token can carry complex information which e g may describe the entire state of a process or a data base Today most practical applications of Petri nets use one of the different kinds of high level nets A considerable body of knowledge exists about high level Petri nets this includes theoretical foundations analysis methods and many applications Unfortunately the papers on high level Petri nets have been scattered throughout various journals and collections As a result much of this knowledge is not readily available to people who may be interested in using high level nets
