The Jewelers' Circular and Horological Review, 1899 Changing Expectations for the K-12 Teacher Workforce

National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Science Education, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Understanding the Changing Structure of the K-12 Teacher Workforce, 2020-06-10 Teachers play a critical role in the success of their students both academically and in regard to long term outcomes such as higher education participation and economic attainment. Expectations for teachers are increasing due to changing learning standards and a rapidly diversifying student population. At the same time there are perceptions that the teaching workforce may be shifting toward a younger and less experienced demographic. These actual and perceived changes raise important questions about the ways teacher education may need to evolve in order to ensure that educators are able to meet the needs of students and provide them with classroom experiences that will put them on the path to future success. Changing Expectations for the K-12 Teacher Workforce Policies Preservice Education Professional Development and the Workplace explores the impact of the changing landscape of K-12 education and the potential for expansion of effective models, programs and practices for teacher education. This report explores factors that contribute to understanding the current teacher workforce changing expectations for teaching and learning trends and developments in the teacher labor market, preservice teacher education and opportunities for learning in the workplace and in-service professional development.

Sustainable Agriculture Reviews Eric Lichtfouse, 2013-02-12 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children. Sustainable agriculture is a discipline that addresses current issues such as climate change, increasing food and fuel prices, poor nation starvation, rich nation obesity, water pollution, soil erosion, fertility loss, pest control and biodiversity depletion. Novel solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, philosophy and social sciences. Because actual society issues are now intertwined, global and fast developing sustainable agriculture will bring solutions to build a safer world. This book series gathers review articles that analyze current agricultural issues and knowledge, then propose alternative solutions. It will therefore help all scientists, decision makers, professors, farmers and politicians who wish to build a safe agriculture, energy and food system for future generations.
