Computer Security Literacy

Douglas Jacobson, Joseph Idziorek, 2012-11-27 Computer users have a significant impact on the security of their computer and personal information as a result of the actions they perform or do not perform. Helping the average user of computers or more broadly information technology make sound security decisions Computer Security Literacy: Staying Safe in a Digital World focuses on practical security topics that users are likely to encounter on a regular basis. Written for nontechnical readers, the book provides context to routine computing tasks so that readers better understand the function and impact of security in everyday life. The authors offer practical computer security knowledge on a range of topics including social engineering, email and online shopping, and present best practices pertaining to passwords, wireless networks and suspicious emails. They also explain how security mechanisms such as antivirus software and firewalls protect against the threats of hackers and malware. While information technology has become interwoven into almost every aspect of daily life, many computer users do not have practical computer security knowledge. This hands-on, in-depth guide helps anyone interested in information technology to better understand the practical aspects of computer security and successfully navigate the dangers of the digital world.

Pervasive Computing

Patrik Floréen, Antonio Krüger, Mirjana Spasojevic, 2010-05-06 th Welcome to the proceedings of the 8th International Conference on Pervasive Computing (Pervasive 2010). After Toronto, Sydney and Nara, the conference has now returned to Europe. Pervasive is one of the most important conferences in the area of pervasive and ubiquitous computing. As in the previous year, we had two categories of technical papers: Full Papers and Notes.

Pervasive attracted 157 valid submissions from which the Technical Program Committee (TPC) accepted 24 full papers and one note, resulting in an overall acceptance rate of 16%. The submissions included 628 authors from 27 countries representing all the continents except Antarctica. As we can see from these figures, Pervasive is a truly global, highly competitive conference. A major conference such as Pervasive requires a rigorous and objective process for selecting papers. This starts with the selection of a high quality TPC. We were fortunate to be able to draw on the wisdom and experience of our 28 TPC members from the most prestigious universities and research labs in Europe, North America and Asia. This committee was aided by the input of no less than 238 external reviewers chosen on the basis of their domain knowledge and relevance to pervasive computing. The papers were selected using a double blind review with four peer reviews per paper and a discussion phase among the reviewers and a discussion of the papers in the TPC meeting, which was held in Palo Alto during December 12-13, 2009. We thank Nokia Research Center for hosting the meeting.

Privacy and Identity in a Networked Society

Stefan Strauß, 2019-04-16 This book offers an analysis of privacy impacts resulting from and reinforced by technology and discusses fundamental risks and challenges of protecting privacy in the digital age. Privacy is among the most endangered species in our networked society.

personal information is processed for various purposes beyond our control. Ultimately this affects the natural interplay between privacy, personal identity and identification. This book investigates that interplay from a systemic socio-technical perspective by combining research from the social and computer sciences. It sheds light on the basic functions of privacy, their relation to identity and how they alter with digital identification practices. The analysis reveals a general privacy control dilemma of digital identification shaped by several interrelated socio-political, economic and technical factors. Uncontrolled increases in the identification modalities inherent to digital technology reinforce this dilemma and benefit surveillance practices, thereby complicating the detection of privacy risks and the creation of appropriate safeguards. Easing this problem requires a novel approach to privacy impact assessment (PIA) and this book proposes an alternative PIA framework which at its core comprises a basic typology of personally and technically identifiable information. This approach contributes to the theoretical and practical understanding of privacy impacts and thus to the development of more effective protection standards. This book will be of much interest to students and scholars of critical security studies, surveillance studies, computer and information science, science and technology studies and politics.
