Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2004 Christian Barillot, David R. Haynor, Pierre Hellier, 2011-04-05 The 7th International Conference on Medical Imaging and Computer Assisted Intervention (MICCAI 2004) was held in Saint Malo, Brittany, France, at the Palais du Grand Large conference center, September 26-29, 2004. The purpose of the conference was to host MICCAI 2004, which was strongly encouraged and supported by IRISA Rennes. IRISA is a publicly funded national research laboratory with a staff of 370, including 150 full-time researchers, scientists, and teaching researchers, and 115 postgraduate students. INRIA, the CNRS, and the University of Rennes 1 are all partners in this mixed research unit, and all three organizations were helpful in supporting MICCAI. MICCAI has become a premier international conference with in-depth sessions on the multidisciplinary fields of medical image computing, computer-assisted intervention, and medical robotics. The conference brings together clinicians, biological scientists, computer scientists, engineers, physicists, and other researchers, and offers them a forum to exchange ideas in these exciting and rapidly growing fields. The impact of MICCAI increases each year, and the quality and quantity of submitted papers this year was very impressive. We received a record 516 full submissions (8 pages in length) and 101 short communications (2 pages from 36 different countries and 5 continents, see figures below). All submissions were reviewed by up to 4 external reviewers from the Scientific Review Committee and a primary reviewer from the Program Committee. All reviews were then considered by the MICCAI 2004 Program Committee, resulting in the acceptance of 235 full papers and 33 short communications.

Detection of Fetal Abnormalities Based on Three Dimensional Nuchal Translucency Khin Wee Lai, Eko Supriyanto, 2012-10-29 Ultrasound US prenatal screening has been proposed as the most effective technique for Trisomy 21 early assessment. Assessment of Nuchal Translucency (NT) offers a promising non-invasive method for fetal abnormalities detection, up to 75%. Nevertheless, current clinician practice of NT examination by locating the sonogram calipers on 2D US image requires highly trained and competent operators by adhering to a standard, tedious

protocol therefore it is prone to errors and hence it decreases the reliability in intra and inter observer repeatability This Brief provides the basic knowledge regarding Trisomy 21 diseases and its existing detection methods The restrictions and disadvantages of each method are discussed accordingly Therefore a non invasive early detection method using 3D ultrasound reconstruction of Nuchal Translucency is introduced This new method for 3D NT assessments has an edge over the previous 2D methods and entails the composite function in visualizing the explicit internal marker structure Further image processing techniques covered from data acquisition pre processing speckle noise reduction and 3D segmentation are also discussed This should be especially useful for students and professional researchers in the Biomedical and image processing fields

CARS 2004 H. U. Lemke,Heinz U. Lemke,2004 Almost 500 paper and poster contributions from more than 30 countries had to be evaluated for CARS 2004 In addition to the traditional CARS themes and topics emphasis has been given to developments such as IHE Surgical Workflow and PACS Operation Room of the Future and Strategic Thinking In special congress sessions partner societies such as SPIE and SCAR have joined these endeavours to assist in achieving progress in these fields While the increased reliance on multi source information is proceeding at a rapid rate it is interesting to note that the basis for the greater part of medical decision making is still medical imaging This may change as genomics and proteomics fulfil more of their potential but it is estimated that more than half of current hospital visits result in imaging studies In that respect it is true that the more things change the more they stay the same Alphonse Karr 1849 and that medical imaging is the cornerstone of the field This focus on medical imaging is evident throughout the CARS conference with sessions dedicated to Medical Imaging MI itself Image Processing and Display IPD Image Guided Radiological Therapy IGRT Image Guided Therapy IGT and separate symposia on Computer Aided Diagnosis based on imaging and both Cardiovascular and Maxillofacial Imaging Still it is up to you the engineers scientists clinicians and related personnel participating in CARS to ensure that innovation in technology and procedures is not developed just for the sake of change but instead to achieve progress and thereby provide better patient care
