,1999-10      *Determination of (customer) benefit-based willingness to pay* Nancy Wießner,2022-05-06 Seminar paper from the year 2018 in the subject Business economics Miscellaneous grade 1.0 University of Applied Sciences Riedlingen language English abstract K. Chenhelfer GmbH a manufacturer of kitchen appliances has set itself the goal of investing in digitization. The management wants to fight against the increasing competitive pressure and re-establish itself as a major market leader. Although the company has already taken the first steps towards digitization such as its own website and internal digital processes, the management would like to change its business model and enter the market with a highly digitized food processor. This food processor can automatically download cooking recipes from an online platform operated by K. Chenhelfer GmbH. You can also upload recipes you have created to the online platform. With the help of sensors, the machine is also intended to revolutionize the smart home concept as an extension. The food processor connects to the refrigerator via WiFi and checks whether the fresh ingredients required for the recipes are available. If any are missing, they can be conveniently ordered and delivered online via an online grocery shop. Integration with intelligent storage cupboards and an interface to intelligent kitchen stoves are also planned. Since going to market comes with the introduction of a new business model, marketing has to deal with pricing strategy for the time being. The machine is rented for a comparatively low monthly fee. However, the customer pays additional fees for using the online services, sharing recipes, networking with refrigerators, etc. A new price model is also to be used for this, which contains both a variant based on the benefit intensity and a flat rate variant. However, the management is now faced with the question of whether this food processor and the associated business model have any chance on the market at all. In addition to other issues, the management is particularly interested in how high the individual willingness to pay of customers will be in relation to the use of online services.

*Autonomic Computing* Richard Murch,2004 This book introduces Autonomic Computing. This concept is a cornerstone of IBM's strategic initiative and it offers great promise because autonomic computing systems have the ability to manage themselves and dynamically adapt to change in accordance with evolving or dynamic business policies and objectives. The term autonomic comes from the autonomic nervous system, which controls many organs and muscles in the human body. These systems can perform management activities based on situations they observe or sense in the IT environment. Rather than IT professionals initiating management activities, the system observes something about itself and acts accordingly. This allows the IT professional to focus on high value tasks while the technology manages the more mundane operations. This book explains how this can be made to happen and the changes that need to be made to make it happen.
