Grönwald,2022-01-18 Seminar paper from the year 2021 in the subject Engineering Computer Engineering grade 1 0  
University of Siegen language English abstract Addressing children s needs and interests is crucial when designing and  
developing computational devices for this user group Different approaches to include children in the design process such as  
Participatory Design have been investigated and applied in past research A way to engage children as active design partners  
is to let them build and reconfigure their own devices Construction kits as they have been developed by researchers in the  
past enable children to do so Several application scenarios for why children would build their own handhelds and wearable  
computers with different construction kits have been identified in past research The hardware and software components that  
were included in developed kits as well as the way they were used and evaluated varied widely This paper outlines the  
evolution of the investigation and application of construction kits in the research field of wearable computers for children By  
referring to approaches and findings presented in related work this paper aims to highlight the potential of using these  
insights as a basis for future investigations and user centered design processes Despite the technological advances it is  
argued that design and development processes for wearable computers for children can benefit from past research
