

A scenic sunset over a rocky coastline. The sky is filled with warm, orange, and yellow hues, transitioning into darker blues and purples at the horizon. In the foreground, dark, jagged rocks are silhouetted against the bright water. Waves are crashing against the rocks, creating white foam. The overall atmosphere is peaceful and dramatic.

The goal of this textbook is to provide first year engineering students with a firm grounding in the fundamentals of chemical and bioprocess engineering. However instead of being a general overview of the two topics Fundamentals of Chemical and Bioprocess Engineering will identify and focus on specific areas in which attaining a solid competency is desired. This strategy is the direct result of studies showing that broad based courses at the freshman level often leave students grappling with a lot of material which results in a low rate of retention. Specifically strong emphasis will be placed on the topic of material balances with the intent that students exiting a course based upon this textbook will be significantly higher on Bloom's Taxonomy knowledge, comprehension, application, analysis, synthesis, evaluation, and creation relating to material balances. In addition this book also provides students with a highly developed ability to analyze problems from the material balances perspective which leaves them with important skills for the future. The textbook consists of numerous exercises and their solutions. Problems are classified by their level of difficulty. Each chapter has references and selected web pages to vividly illustrate each example. In addition to engage students and increase their comprehension and rate of retention many examples involve real world situations

Follow one man through our collective cultural narrative and see how your own life connects to the challenges we all face as the planet enters a period of inevitable change. Can someone use their privilege to move towards the exit of a culture that requires it to function? Chasing a Different Carrot A Manifesto for the Predicament of Privilege answers this question plus plenty of others on a path towards systemic liberation

Building Comprehension in Every Classroom Rachel Brown, Peter Dewitz, 2013-10-09 This book presents a practical model and specific unit and lesson planning ideas for enhancing students reading comprehension in any 2-8 classroom. The authors provide innovative suggestions that help teachers construct a comprehension curriculum organized around literature informational texts or a basal reading program. Vivid case examples and vignettes bring to life ways to build the knowledge, strategies, and motivation that children need to engage with different types of texts and become proficient, enthusiastic readers.
