**Youtube War** Cori Dauber,2009-11-30 There is a vast literature on the potential for new technologies to create a Revolution in Military Affairs or networked warfare

but that is a discussion of the impact of military technology on the way the force itself can be used Today there is a question regarding the impact of new communication and information technologies in the hands of civilians some of whom are combatants on the environment in which the force will be used This monograph argues that the impact of these technologies has been and will be great enough that the way they are shaping the battlefield needs to be understood Waging war against terrorists or insurgents using a terrorist playbook is a qualitatively different enterprise from earlier wars By definition terrorists are too weak to fight successful conventional battles They fight to shape the perceptions and attitudes of the public a battle over the public's will to continue fighting whether that is the indigenous public insurgents seek to intimidate or the domestic American public they seek to influence so as to force counterinsurgents to withdraw from the battlefield prematurely And in the modern world this will be a battle to shape media coverage Terrorist attacks ought to be understood as consciously crafted media events and while that has always been the case today it is more true than ever before in two ways First the terrorist attack is itself often designed and intended for the cameras Terrorist attacks are designed for an audience Their true target is not that which is blown up that item or those people for that is merely a stage prop What is really being targeted are those watching at home The goal after all is to have a psychological effect to terrorize and it isn't possible to have such an effect on the dead This means that the terrorist attack is a media event in the sense that it is designed to attract the attention of the media the same way that a political campaign event is a media event designed to attract the media's attention and thus garner coverage When we discuss media attention we are really first and foremost talking about television and we are really then talking about gaining the attention of the cameras and the way to do that is to provide good visuals however those are defined in a particular context Understanding the interaction between media needs and the way terrorist attacks satisfy those needs is essential This is the case because developing strategies to fight an insurgent enemy has become more challenging as today's wars are taking place in a radically new information and media environment and today's terrorists and insurgents have been brilliant at capitalizing on this environment in their operational art For today terrorism is a media event in a second sense Terrorists and insurgents are now no longer dependent upon the professional media to communicate In fact to an unprecedented degree the professional media have become dependent upon them This is due to technological developments which permit any terrorist to film edit and upload their actions virtually in real time whether Western media are there to serve witness or not Several new technologies all of which have become relatively mature at relatively the same time together have made this new information environment and it is this environment on which terrorists and insurgents are capitalizing An information or communication technology becomes mature when it meets several criteria First it must be available off the shelf Second it must be affordable something within financial reach of a decent percentage of the population Third critically it must be small enough to be easily portable Fourth it must be available in most of the world and not just in the developed countries
