*Gaming AI* George Gilder, 2020-10-15 Pointing to the triumph of artificial intelligence over unaided humans in everything from games such as chess and Go to vital tasks such as protein folding and securities trading many experts uphold the theory of a singularity This is the trigger point when human history ends and artificial intelligence prevails in an exponential cascade of self replicating machines rocketing toward godlike supremacy in the universe Gaming AI suggests that this belief is both dumb and self defeating Displaying a profound and crippling case of professional amnesia the computer science establishment shows an ignorance of the most important findings of its own science from Kurt G del s incompleteness to Alan Turing s oracle to Claude Shannon s entropy Dabbling in quantum machines these believers in machine transcendence defy the deepest findings of quantum theory Claiming to create minds they are clinically out of their minds Despite the quasi religious pretensions of techno elites nobly saving the planet from their own devices their faith in a techno utopian singularity is a serious threat to real progress An industry utterly dependent on human minds will not prosper by obsoleting both their customers and their creators Gaming AI calls for a remedial immersion in the industry s own heroic history and an understanding of the actual science of their own human minds

authors during these years in this domain It showcases work on methods to play the games generators of content and video game optimization It also outlines potential further work in an area that offers multiple research directions for the future
