**The Discourse of Online Consumer Reviews** Camilla Vásquez, 2014-06-19 The Discourse of Online Reviews is the first book to provide an account of the discursive pragmatic and rhetorical features of this rapidly growing form of technologically mediated communication Examining a corpus of over 1 000 consumer reviews Camilla Vásquez explores many of the discourse features that are characteristic of this new user generated computer mediated and primarily text based genre She investigates the language used by reviewers as they forge connections with their audiences to draw them into their stories as they construct their expertise and authority on various subjects and as they evaluate and assess their consumer experiences She also demonstrates how reviewers display their awareness about emerging conventions of the very genre in which they are participating This book adopts an eclectic approach to the analysis of discourse and explores topics such as evaluation identity and intertextuality as they occur in online reviews of hotels restaurants recipes films and other consumer products

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deacon A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in *Frontiers in Computational Neuroscience* collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some

aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point

*The Virginia Quarterly Review* ,2018    Chasing the Sun Katy Colins,2017-07-27 A gorgeously feel good treat the perfect summer escape I loved it Miranda Dickinson Georgia Green is on the conveyor belt to happiness    Open Source Leadership: Reinventing Management When There's No More Business as Usual Rajeev Peshawaria,2017-10-27 From taxi rides hotel stays car driving to communicating and paying everything we knew as normal has changed beyond recognition To lead effectively in today s brave new world you have to question EVERYTHING For the first time in human history knowledge is free and almost every boundary to communication has been lifted This open source world has permanently altered the business landscape And you can count on the fact that the pace of change will only accelerate Yet companies still rely on management tools and practices that were at best mildly effective in their heyday In Open Source Leadership Rajeev

Peshawaria reveals the vision insight and practices he has used to help some of today's largest and most influential organizations meet the open source world head on. It all starts with asking the right questions. What's the most effective leadership style in a world of 24/7 connectivity? How has the very concept of leadership changed in the open source era? How do you inspire and reward performance in the gig economy? How do you measure engagement and effectively address the gaps? How can you lead innovation quickly and continuously? Peshawaria reveals the answers to these questions and they will surprise you. Based on his company's groundbreaking research spanning 28 countries, he concludes that traditional industrial age thinking needs a massive upgrade to successfully navigating the brave new world of business. **Open Source Leadership** rewrites the rules of management, giving you a unique look at the most common misperceptions, illusions, and downright wrong information you've been getting about what works and what doesn't. It provides a new counterintuitive model for seizing competitive edge in any industry. Among other issues, the book argues convincingly that positive autocracy must replace democratic leadership; talent and innovation are abundant, not scarce; early identification of high potentials is counterproductive; and setting employees free to do as little as they want will increase productivity.
