principal classes of gall stones may be distinguished 1 Pure cholesterin stones These are hard usually of oval or roughly spherical form and seldom exhibiting facetting of the size of a cherry to that of a pigeon s egg They are pure white or yellowish and translucent or more rarely brown greenish or brownish black on the surface The surface is as a rule smooth or nodular rarely there is a crystalline coating and more rarely still crystals which have their origin in the deeper layers penetrate to and appear upon the surface On section stratification is absent or only feebly marked the substance being white and crystalline throughout or showing brown deposits between the crystals especially in the centre On fracture a radiating crystalline striation is distinctly visible 2 Laminated cholesterin stones These are for the most part hard but occasionally when dry they are brittle and friable The surface is of various tints white grey yellow green brown or brownish black In form and size they resemble pure cholesterin stones but are more often distinctly faceted In section they are more or less distinctly laminated the laminae varying greatly in thickness from 0 1 or less to 1 millimeter and in tint Layers which are almost purely white alternate with others which are yellow brown and even green or red The external layers are often not crystalline but vitreous or earthy The nearer the centre is approached the more crystalline is the structure About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
