

CAM CHAIN TENSIONER

Remove

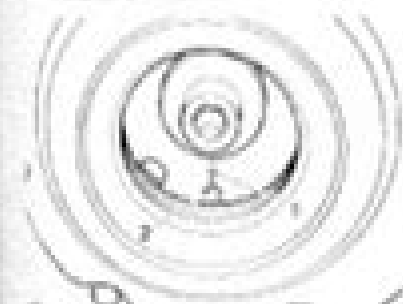

NOTE: For access to the cam chain tensioner:

- 1 Disconnect the battery, negative (black) lead first.
- 2 Remove the fuel tank (see section 6).
- 3 Remove the pulley (see section 6).
- 4 Remove the cam cover (see this section).
- 5 Remove the inspection plate from the right-hand cam cover.

Inspection plate

- 1 Rotate the camshaft clockwise (the marked direction of rotation), using the bar fitted to the end of the camshaft. Stop rotation when number 1 cylinder spring decompresses (TDC), that is when the 'T' mark on the spring retainer aligns with the line at the bottom of the cover.

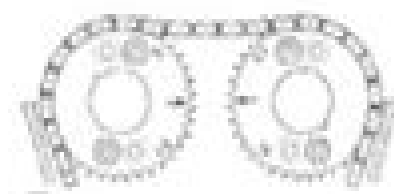

T' Mark

Water line

NOTE:

- 1 In addition to the 'T' mark alignment, at TDC, the alignment marks on the camshaft sprockets will point towards a point level with the joint face.

Camshaft to Cylinder Head Alignment Marks

- 1 Place a suitable wedge between the tensioner body and coverplate, to hold the cam chain flat during removal of the tensioner.
- 2 Carefully remove the centre nut from the tensioner and withdraw the tensioner spring.

WARNING: The tensioner centre nut is under spring tension. Always wear hand, eye and face protection when withdrawing the centre nut and take great care in order to minimise the risk of injury and loss of components.

- 3 Remove the bolts securing the tensioner to the upper coverplate and withdraw the tensioner and pulley.

Installation

- 1 Check that number 1 cylinder is at top dead centre (TDC).
- 2 Ensure that the wedge (if) used is still holding the tensioner body in contact with the cam chain. Check that the camshaft timing marks align correctly and correspond with the joint face of the head.

- 3 Set the tensioner plunger into the first tooth of the retainer (a maximum extension) by manually lifting the tensioner body.

Tensioner Plunger Set-up

- 1 Fit the tensioner, complete with a new pin, to the upper coverplate and tighten the retaining bolt to 8 Nm.

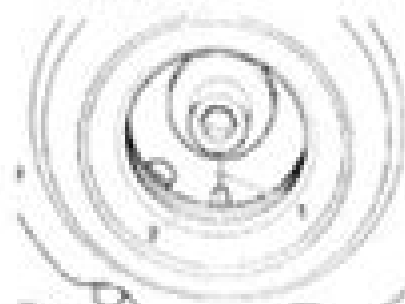

NOTE:

- 1 In fitting a new tensioner, observe the following:
 - 2 Remove the new tensioner assembly from the packaging. This examination is to ensure that the tensioner has not tightened fully into the tensioner body and that the tensioner body (i.e. the part which actually connects the chain rubbing strip) is fully retracted into the housing.
 - 3 Prior to assembly into the engine it is necessary to disassemble the tensioner nut, washer and spring. To do this without damaging the internal components, lift the spring nut at least a half turn clockwise (i.e. tighter) further into the housing with the plunger spring upwards. The tensioner will now then be withdrawn safely in the normal way without causing internal damage to tensioner components.

- 1 Remove the tensioner body wedge (if) placed to maintain tensioner body.
- 1 Fit a new locking washer to the centre nut, using finger pressure only push the internal section of the tensioner into contact with the tensioner body. Push the spring and centre nut to the tensioner. Tighten the centre nut to 8 Nm.

- 1 Check that the tensioner plunger is correctly located in the centre of camshaft teeth after removal from above.

- 3 Rotate the engine through 4 full revolutions, and repeat number 1 cylinder to TDC. Ensure that the 'T' mark on the spring retainer aligns with the line at the bottom of the cover.

T' Mark

Water line

- 2 Check that the camshaft timing marks align as illustrated below.

Camshaft to Cylinder Head Alignment Marks

- 10 Re-check tensioner plunger location against the tensioner chain.
- 11 Refit the cam cover.
- 12 Refit the upper cover inspection plate.
- 13 Refit all items removed for access as described in the relevant sections of this service manual.

NOTE:

- 1 Refit and reconnect the battery positive red lead top.
