## Google Maps Latest Returns:

**Beginning Google Maps Applications with Rails and Ajax** Andre Lewis, Cameron Turner, Jeffrey Sambells, Michael Purvis, 2007-05-02 The Google Maps API remains one of the showcase examples of the Web 2.0 development paradigm. *Beginning Google Maps Applications with Rails and Ajax* From Novice to Professional is the first book to comprehensively introduce the service from a developer perspective showing you how you can integrate mapping features into your Rails driven web applications. Proceeding far beyond simplistic map display you'll learn how to draw from a variety of data sources such as the U.S. Census Bureau's TIGER Line data and Google's own geocoding feature to build comprehensive geocoding services for mapping many locations around the world. The book also steers you through various examples that show how to encourage user interaction such as through pinpointing map locations, adding comments, and building community driven maps. You'll want to pick up a copy of this book because this is the first book to comprehensively introduce the Google Maps application development using the Rails development framework. You'll be introduced to the very latest changes to the Google Maps API embodied in the version 2 release. It is written by four developers actively involved in the creation of location based mapping services. For additional info please visit the author's reference site for this book: *Beginning Google Maps Applications with PHP and Ajax* Jeffrey Sambells, Michael Purvis, Cameron Turner, 2007-12-22 Until recently building interactive web based mapping applications has been a cumbersome affair. This changed when Google released its powerful Maps API. *Beginning Google Maps Applications with PHP and Ajax* was written to help you take advantage of this technology in your own endeavors whether you're an enthusiast playing for fun or a professional building for profit. This book covers version 2 of the API including Google's new Geocoding service. Authors Jeffrey Sambells, Cameron Turner, and Michael Purvis get rolling with examples that require hardly any code at all but you'll quickly become acquainted with many facets of the Maps API. They demonstrate powerful methods for simultaneously plotting large data sets, creating your own map overlays, and harvesting and geocoding sets of addresses. You'll see how to set up alternative tile sets and where to access imagery to use for them. The authors even show you how to build your own geocoder from scratch for those high volume batch jobs. As well as providing hands-on examples of real mapping projects, this book supplies a complete reference for the Maps API along with the relevant aspects of JavaScript, CSS, PHP, and SQL. Visit the authors' website for additional tips and advice: *Google Power* Chris Sherman, 2005-05-27 Learn advanced techniques for maximizing the Google search engine and extract the best content from Google without having to learn complicated code. Go under the hood and learn a wide range of advanced web search techniques through practical examples. This is an ideal resource for students, librarians, journalists, researchers, businesspeople, lawyers, investigators, and anyone interested in conducting an in-depth search: *Discovering GIS and ArcGIS* Bradley A. Shellito, 2015-01-20 Bradley Shellito's new textbook uses hands-on experience to introduce both the how and why of geographic information systems. Students learn to combine an understanding of basic GIS concepts with practical

ArcGIS skills following step by step instructions to accomplish a wide range of real world tasks and applications while always keeping sight on the conceptual basis and practical impact of what they are doing Discovering GIS and ArcGIS is appropriate for introductory GIS courses or advanced or applied GIS courses Instructors will find the coverage they need for a single intro level course a single advanced or applied course or a two course sequence
