**Agriculture-nutrition linkages and child health in the presence of conflict in Nepal** Bageant, Elizabeth, Liu, Yanyan, Diao, Xinshen, 2016-03-18 Much policy and research attention has focused on the relationship between agriculture and nutrition We extend this analysis to the context of Nepal's decade long civil conflict Understanding how conflict or similar stress mitigates the agriculture nutrition linkage is essential to developing impactful agriculture and nutrition policy in potential conflict zones To our knowledge there is no prior empirical work on the link between agriculture and nutrition in the context of conflict We find a robust relationship between milk consumption and anthropometric outcomes We also show a positive link between milk production and milk consumption at the household level We find significant negative relationships between conflict and milk consumption for households owning few livestock while such relationships do not exist for larger holders We attribute these heterogeneous effects to conflict related productivity declines and milk price increases both of which disproportionately affect households with fewer livestock and lower milk production capacity Among rural households in Nepal milk production could serve as a nutritional buffer in times of conflict or other stress and thus policies that promote households livestock production could be effective measures in improving resilience of the rural poor against shocks that negatively affect child health outcomes
