## Emergency Lowering

In the event that the emergency lowering function needs to be activated, position the *Sara Flex* so that the patient can be lowered on to an appropriate surface such as a chair or bed. Stand near of the *Sara Flex*, on the same side as the red emergency lowering handle. (See Fig. 12)

Use one hand to gradually pull up the emergency lowering handle (and keep it there) allowing the lifting arm to lower the patient onto the surface. Once lowered, let go of the emergency lowering handle and it will return to its correct position. (See Fig. 13)

### NOTE

If the lifting arm does not start to lower when the emergency lowering handle is pulled up, use your other hand to push down on the lifting arm whilst still pulling up on the emergency lowering handle, until the lifting arm begins to lower. (If the lifting arm is in the fully upright position, it may help to stand facing the patient and push the lifting arm away from you). Keep the emergency lowering handle pulled up fully until the patient is lowered on to the receiving surface.

## Automatic Cut-Out

This is not an operator control but a function built into the *Sara Flex* electronics.

If the lift is inadvertently overloaded by trying to raise or lower a load heavier than permitted, an automatic "cut-out" function operates to prevent the lift from raising a weight in excess of the safe working load (SWL). This will stop the lift's motion automatically. If this occurs, release the "up" button on the hand control or the control panel. Do not continue to raise the load. Make sure that the *Sara Flex* operates only within its safe working load.
