information evaluation skills through a deeper understanding of the foundational principles of study design and statistical methods. Because guidance on how a study's limited findings should not be used is rare, practitioners must understand and evaluate for themselves the veracity and implications of the inherently limited primary literature findings they use as sources of drug information to make evidence-based decisions together with their patients. The editors organized the book into three supporting sections to meet their pedagogical goals and address practitioners' needs in translating research into practice. Thanks to the editors, authors, and content of this book, you can now be more prepared than ever before for translating research into practice.

Marketing Data Science Thomas W. Miller, 2015-05-02. Now a leader of Northwestern University's prestigious analytics program, presents a fully integrated treatment of both the business and academic elements of marketing applications in predictive analytics. Writing for both managers and students, Thomas W. Miller explains essential concepts, principles, and theory in the context of real-world applications. Building on Miller's pioneering program, *Marketing Data Science* thoroughly addresses segmentation, target marketing, brand and product positioning, new product development, choice modeling, recommender systems, pricing, research, retail site selection, demand estimation, sales forecasting, customer retention, and lifetime value analysis. Starting where Miller's widely praised *Modeling Techniques in Predictive Analytics* left off, he integrates crucial information and insights that were previously segregated in texts on web analytics, network science, information technology, and programming. Coverage includes: The role of analytics in delivering effective messages on the web; Understanding the web by understanding its hidden structures; Being recognized on the web and watching your own competitors; Visualizing networks and understanding communities within them; Measuring sentiment and making recommendations; Leveraging key data science methods: databases, data preparation, classical Bayesian statistics, regression, classification, machine learning, and text analytics. Six complete case studies address exceptionally relevant issues such as separating legitimate email from spam, identifying legally relevant information for lawsuit discovery, gleanings from anonymous web surfing data, and more. This text's extensive set of web and network problems draw on rich public domain data sources; many are accompanied by solutions in Python and/or R. *Marketing Data Science* will be an invaluable resource for all students, faculty, and professional marketers who want to use business analytics to improve marketing performance.
