Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models Jorge Garza Ulloa, 2021-11-30

Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models focuses on the relationship between three different multidisciplinary branches of engineering Biomedical Engineering Cognitive Science and Computer Science through Artificial Intelligence models. These models will be used to study how the nervous system and musculoskeletal system obey movement orders from the brain as well as the mental processes of the information during cognition when injuries and neurologic diseases are present in the human body. The interaction between these three areas are studied in this book with the objective of obtaining AI models on injuries and neurologic diseases of the human body studying diseases of the brain spine and the nerves that connect them with the musculoskeletal system. There are more than 600 diseases of the nervous system including brain tumors epilepsy Parkinson's disease stroke and many others. These diseases affect the human cognitive system that sends orders from the central nervous system CNS through the peripheral nervous systems PNS to do tasks using the musculoskeletal system. These actions can be detected by many Bioinstruments Biomedical Instruments and cognitive device data allowing us to apply AI using Machine Learning Deep Learning Cognitive Computing models through algorithms to analyze detect classify and forecast the process of various illnesses diseases and injuries of the human body.
