**Quantitative Social Science** Kosuke Imai, 2018-02-09 An introductory textbook on data analysis and statistics written especially for students in the social sciences and allied fields. Quantitative analysis is an increasingly essential skill for social science research yet students in the social sciences and related areas typically receive little training in it or if they do they usually end up in statistics classes that offer few insights into their field. This textbook is a practical introduction to data analysis and statistics written especially for undergraduates and beginning graduate students in the social sciences and allied fields such as economics sociology public policy and data science. Quantitative Social Science engages directly with empirical analysis showing students how to analyze data using the R programming language and to interpret the results it encourages hands on learning not paper and pencil statistics. More than forty data sets taken directly from leading quantitative social science research illustrate how data analysis can be used to answer important questions about society and human behavior. Proven in the classroom this one of a kind textbook features numerous additional data analysis exercises and interactive R programming exercises and also comes with supplementary teaching materials for instructors. Written especially for students in the social sciences and allied fields including economics sociology public policy and data science. Provides hands on instruction using R programming not paper and pencil statistics. Includes more than forty data sets from actual research for students to test their skills on. Covers data analysis concepts such as causality measurement and prediction as well as probability and statistical tools. Features a wealth of supplementary exercises including additional data analysis exercises and interactive programming exercises. Offers a solid

foundation for further study Comes with additional course materials online including notes sample code exercises and problem sets with solutions and lecture slides Looking for a more accessible introduction Consider Data Analysis for Social Science by Elena Llaudet and Kosuke Imai which teaches from scratch and step by step the fundamentals of survey research predictive models and causal inference It covers descriptive statistics the difference in means estimator simple linear regression and multiple linear regression

**Quantitative Methods for the Social Sciences** Daniel Stockemer,2018-11-19

This textbook offers an essential introduction to survey research and quantitative methods Building on the premise that statistical methods need to be learned in a practical fashion the book guides students through the various steps of the survey research process and helps to apply those steps toward a real example In detail the textbook introduces students to the four pillars of survey research and quantitative analysis 1 the importance of survey research 2 preparing a survey 3 conducting a survey and 4 analyzing a survey Students are shown how to create their own questionnaire based on some theoretically derived hypotheses to achieve empirical findings for a solid dataset Lastly they use said data to test their hypotheses in a bivariate and multivariate realm The book explains the theory rationale and mathematical foundations of these tests In addition it provides clear instructions on how to conduct the tests in SPSS and Stata Given the breadth of its coverage the textbook is suitable for introductory statistics survey research or quantitative methods classes in the social sciences

**Principles of Data Management and Presentation** John P. Hoffmann,2017-07-03 Why research Developing research questions Data Principles of data management Finding and using secondary data Primary and administrative data Working with missing data Principles of data presentation Designing tables for data presentations Designing graphics for data presentations

**Legislator Use of Communication Technology** Joe West,2018-12-03 Political use of communication technology is rapidly changing the nature of politics one need look no further than President Trump s use of Twitter to realize the impact that communication technology is having on political processes Communication technology has long been recognized as part of the policy feedback process but until now has received relatively little focus often relegated to a line or two in a policy process theory system diagram labeled feedback This book takes a fresh look at the role that communication technology

plays in the policy process by applying natural science control and electrical engineering concepts such as bandwidth latency phase crossover and positive and negative feedback to develop the critical frequency theory of policy system stability. This theory suggests that every policymaking institution has some critical frequency of communications from the policy environment that once exceeded causes the policymaking institution to go unstable and it is this instability that causes the policymaking process to speed up. With the theory developed data collected on approximately 2 000 state legislators from every state in the U.S. is analyzed using linear and nonlinear regression models to understand the statistically significant relationships between communication technology frequency of use and importance and the demographic political and institutional variables that contribute to policy process stability and instability. Additionally interviews with legislators uncover many novel and interesting examples of the use of communication technology in the policy process. For example legislators note that lobbyists sitting in legislative chambers listening to floor debates are actually texting questions and answers to legislators as they debate. Legislators participating in this process are acting as policymaking puppets for the lobbyists sitting in the gallery. This single use of a communication technology has the capability of changing the very nature of what it means to be a legislator with lobbyists acting as surrogate legislators. [Shaping the Built Environment for Health](#) Heather Katherine Kuiper, 2009. **Rural Water Management in Africa** Leticia K. Nkonya, 2008. As one of the most important natural resources the management of water is becoming increasingly important as water resources are growing more scarce. This is especially the case for rural areas and developing countries such as Africa. In sub Saharan African SSA countries today the demand for water resources is increasing. In this innovative study the author examines these forms of

traditional or customary institutions of water management in a manner that has never been done before First the author provides us with an understanding and appreciation of the differential impact of customary institutions on drinking and irrigation water management Most sociological studies on rural water management in SSA have addressed water management issues without adequately analyzing customary institutions and showing how they affect rural water management Most studies in river basin management focus on water for irrigation Few studies have examined how the customary and statutory institutions influence water management for different water uses This study looks at how the management of water for domestic use differs from the management of water for livestock and small scale irrigation The second unique contribution of this book is the analysis of the role of women and how customary and statutory institutions affect women's participation in water management Few studies have looked at the role of women and their contribution to rural water management Previous studies have focused only on the statutory institutions Finally the study offers a valuable comparison of the effectiveness of statutory and customary institutions in enforcement of their regulations resolving natural resource conflicts and in ensuring access to water for different uses Although many researchers recognize the importance of customary institutions their analysis tends to focus more on the statutory institutions for water management In this book both formal and informal water management institutions are considered for a more balanced understanding The findings of this study will serve as the basis for formulating policies and programs that include customary institutions in the management of rural water resources in Tanzania In Tanzania lack of access to safe water for many rural populations is a major concern Lack of safe water has implications for rural people and the country as a whole Policy makers nongovernmental organizations planners and water providers need to be informed so they can incorporate customary institutions into policies and strategies for management of rural water resources This is an important book for African studies environmental studies and policy studies
