Systems Science And Modeling For Ecological Economics:

Systems Science and Modeling for Ecological Economics Alexey A. Voinov, 2010-07-27 Modeling is a key component to sciences from mathematics to life science including environmental and ecological studies By looking at the underlying concepts of the software we can make sure that we build mathematically feasible models and that we get the most out of the data and information that we have Systems Science and Modeling for Ecological Economics shows how models can be analyzed using simple math and software to generate meaningful qualitative descriptions of system dynamics This book shows that even without a full analytical mathematically rigorous analysis of the equations there may be ways to derive some qualitative understanding of the general behavior of a system By relating some of the modeling approaches and systems theory to real world examples the book illustrates how these approaches can help understand concepts such as sustainability peak oil adaptive management optimal harvest and other practical applications Relates modeling approaches and systems theory to real world examples Teaches students to build mathematically feasible models and get the most out of the data and information available Wide range of applications in hydrology population dynamics market cycles sustainability theory management and more

Systems Science: Theory, Analysis, Modeling, and Design George E. Mobus, 2022-03-09 This book describes a comprehensive approach to applying systems science formally to the deep analysis of a wide variety of complex systems Detailed how to examples of the three phases analysis modeling design of systems science are applied to systems of various types machines organic e g ecosystem and supra organic e g business organizations and government The complexity of the global system has reached proportions that seriously challenge our abilities to understand the consequences of our use of technology modification of natural ecosystems or even how to govern ourselves For this reason complex mathematics is eschewed when simpler structures will suffice allowing the widest possible audience to apply and benefit from the available tools and concepts of systems science in their own work The book shows in detail how to functionally and structurally deconstruct complex systems using a fundamental language of systems It shows how to capture the discovered details in a structured knowledge base from which abstract models can be derived for simulation The knowledge base is also shown to be a basis for generating system design specifications for human built artifacts or policy recommendations policy mechanisms for socio economic ecological systems management The book builds on principles and methods found in the authors textbook Principles of Systems Science co authored with Michael Kalton but without prerequisites It will appeal to a broad audience that deals with complex systems every day from design engineers to economic and ecological systems managers and policymakers

Agent-Based Modeling of Environmental Conflict and Cooperation Todd BenDor, Jürgen Scheffran, 2018-10-12 Conflict is a major facet of many environmental challenges of our time However growing conflict complexity makes it more difficult to identify win win strategies for sustainable conflict resolution Innovative methods are needed to help predict understand and resolve conflicts in cooperative ways Agent Based

Modeling of Environmental Conflict and Cooperation examines computer modeling techniques as an important set of tools for assessing environmental and resource based conflicts and ultimately for finding pathways to conflict resolution and cooperation. This book has two major goals. First, it argues that complexity science can be a unifying framework for professions engaged in conflict studies and resolution, including anthropology, law, management, peace studies, urban planning, and geography. Second, this book presents an innovative framework for approaching conflicts as complex adaptive systems by using many forms of environmental analysis, including system dynamics modeling, agent based modeling, evolutionary game theory, viability theory, and network analysis. Known as VIABLE (Values and Investments from Agent Based interaction and Learning in Environmental systems), this framework allows users to model advanced facets of conflicts, including institution building, coalition formation, adaptive learning, and the potential for future conflict and conflict resolution based on the long term viability of the actors' strategies. Written for scholars, students, practitioners, and policy makers alike, this book offers readers an extensive introduction to environmental conflict research and resolution techniques. As the result of decades of research, the text presents a strong argument for conflict modeling and reviews the most popular and advanced techniques, including system dynamics modeling, agent based modeling, and participatory modeling methods. This indispensable guide uses NetLogo, a widely used and free modeling software package, to implement the VIABLE modeling approach in three case study applications around the world. Readers are invited to explore, adapt, modify, and expand these models to conflicts they hope to better understand and resolve.

Ecological Economics Reviews, Volume 1186 Karin E. Limburg, Robert Costanza, 2010-03-08. This is the inaugural volume in a series of reviews on the theory, policy, and implementation of sustainability and sustainable development, with a focus on the economic, social, and environmental challenges facing the world today. This volume includes papers by leading international experts in the science of sustainability, including Rudolf de Groot, Richard Cowling, Bruce Hannon, R. Kerry Turner, Peter Nijkamp, Peter S. Derbaum, Barry D. Solomon, and Pushpam Kumar. NOTE: Annals volumes are available for sale as individual books or as a journal. Integrating Economic and Ecological Indicators J. Walter Milon, Jason Shogren, 1995-03-18. Recent international appeals for sustainable development policies have renewed efforts to explore the common ground between economics and ecology. This volume presents a collection of papers from leading researchers around the world who evaluate the analytical foundations and empirical systems that are being developed to integrate economic and environmental indicators. These specialists identify key data requirements and modeling systems. Economists, ecologists, and policy makers will find this work introducing integrated modeling systems thought provoking and useful.
