

# 8<sup>th</sup> Grade Math Curriculum Map

## Introduction

This document contains all mandated 2010 Arizona Mathematical Standards for 8<sup>th</sup> grade mathematics. The standards have been organized into units and clusters. The units represent the major domain under which the identified standards fall. The cluster represents the collection of similar concepts within the larger domain. Within these units and clusters the performance objectives have been sequenced to represent a logical progression of the content knowledge. It is expected that all teachers follow the sequence of units and clusters as described in the following document.

## Organization

### Approximate Time

Approximate times are based on a 60-minute instructional session for grades 6-8. All units and clusters must be taught prior to the 2013 AIMS assessment.

### Essential Questions

Essential Questions are to be posed to the students at the beginning of the cluster and revisited throughout the cluster. They are designed to facilitate conceptual development of the content and can be used as a tool for making connections, higher order thinking and inquiry. The students should be able to answer these on their own by the end of the cluster.

### Big Ideas

Big Ideas are the essential understandings that are critical for students' learning. These are the enduring understandings we want students to carry with them from grade level to grade level. Answering the Essential Questions is indicative of a student mastering the Big Idea, however they are not always synonymous. Thus, in cases that the answer to the Essential Question does not include all components of the Big Idea, the Big Idea (for teacher use) has been provided in *italics*.

### Common Misconceptions

These are common misunderstandings students bring to the learning process. Being aware of such misconceptions allows us to plan for them during instruction.

### Content Standards and Mathematical Practices

This document has been organized by content standards and mathematical practices. The content standards are those that represent knowledge specific to the mathematical standard (the five domains). The mathematical practices describe varieties of expertise that mathematics educators at all levels should seek to develop in their students. These practices rest on important "processes and proficiencies" with longstanding importance in mathematics education. The content standards and mathematical standards have been paired to represent possible combinations of content standards with mathematical practices. As described in the Arizona state standards, the content standards are not intended to be taught in isolation; thus, the pairing of these standards provides a possible context for teaching these standards. Each time, the performance objective should be taught to a deeper level of understanding and/or should be connected to the other standards in the cluster.
