Textual Design and Student Learning Michael S. Parer, 1988 A study was conducted to examine the relationships of four areas of textual design factors that are relevant to external students learning as they use their course study guides the micro and macro textual features the linguistics and the instructional design elements Twelve external students from two units at the Gippsland Institute were observed in real time using a Study Protocol Recorder SPR They completed the Lancaster Approaches to Studying Inventory and the Biggs Study Process Questionnaire and were interviewed in a debriefing session It was found that students valued and were aided by access structures i e devices which gave them access to the author s argument enabling them to gain an overview of the text and to locate the key elements of the subject Although few used the terms access structures or advance organizers to describe these devices they did mention the assistance given by tables of contents objectives headings introductory chapters selective sampling and summarizing This led to the conclusion that access structures are of greater help in studying than legibility features The further conclusion was that the use of unambiguous and logical language with appropriate sentence and paragraph sequences can compensate for inadequate typographic signalling and that headings illustrations and photographs that are not directly relevant can annoy those who seek connections between all elements of the textual presentation The ideal is for a blend of all four levels of textual elements to aid the external student in using course study guides so that resources invested in improving textual design will aid both deep and surface learners Two questionnaires are appended 68 references and 6 tables Author GL **WordPerfect Advanced Techniques** Daniel J.
