The Survey of Best Practices in Developing Online Information Literacy Tutorials is a benchmarking report for online tutorial development presenting a wealth of information on the practices involved in and the cost of developing online information literacy tutorials. The 285 page report also looks at how tutorials are marketed and accessed and at popular access points such as Facebook, the library website and others as well as how tutorials are used in for credit classes and more ad hoc use. the similarities and differences between traditional statistics and modern data science as a result learners are disoriented by this seemingly drastic paradigm shift In reaction some traditionalists reject data science altogether while some beginning data analysts employ data mining tools as a black box without a comprehensive view of the foundational differences between traditional and modern methods e g dichotomous thinking vs pattern recognition confirmation vs exploration single method vs triangulation single sample vs cross validation etc This book delineates the transition between classical methods and data science e g from p value to Log Worth from resampling to ensemble methods from content analysis to text mining etc Second this book aims to widen the learner s horizon by covering a plethora of software tools When a technician has a hammer every problem seems to be a nail By the same token many textbooks focus on a single software package only and consequently the learner tends to fit the problem with the tool but not the other way around To rectify the situation a competent analyst should be equipped with a tool set rather than a single tool For example when the analyst works with crucial data in a highly regulated industry such as pharmaceutical and banking commercial software modules e g SAS are indispensable For a mid size and small company open source packages such as Python would come in handy If the research goal is to create an executive summary quickly the logical choice is rapid model comparison If the analyst would like to explore the data by asking what if questions then dynamic graphing in JMP Pro is a better option This book uses concrete examples to explain the pros and cons of various software applications
