Kinds Todd Charles Wood,Paul A. Garner,2009-01-22 Mission statement coresci org Series Editor Todd Charles Wood Core Academy of Science encourages young Christian scholars to explore the hardest problems in creation Engineers sometimes classify problems as easy hard and impossible Easy problems are trivial because they can be solved merely by applying known principles Impossible problems cannot be solved no matter how hard we try Hard problems are the problems in between that require the most work but yield the greatest rewards Sometimes hard problems are accumulations of many easy problems and sometimes they turn out to be impossible When a hard problem is solved though it is widely celebrated For Christians and especially young age creationists understanding creation has many hard problems Evidences of the great age of the universe and earth can be difficult to explain Likewise with evidences of evolution Creationists reject the conventional explanations that involve millions of years and humans evolving from animals but alternative explanations that satisfy our scientific curiosity and our desire to remain true to the revealed Word of God are much rarer and not widely accepted It is much easier to focus on the detection of error rather than the more difficult discovery of truth This focus on error rather than truth pervades evangelical Christianity because it's relatively easy We all like the easy and impossible We teach our children to recite verses from the Bible and answers to our catechisms but when they ask difficult questions we say Only God knows We might even scold them for being impertinent or irreverent Core Academy equips the next generation to tackle these great mysteries by first and most importantly helping young scholars to develop a bold confident faith All too often scholars who face challenging puzzles become disillusioned and stray from the faith Our first goal then must be enriching and nurturing strong faith in Jesus Christ as Savior and Creator

My Universe-A Transcendent Reality Alex Vary,2011-11-21 A theme throughout My Universe is that our consciousness exists simultaneously in transcendent and material domains The gift and power of transcendent consciousness is that we apparently share it with extraterrestrial beings everywhere in the cosmos Author Vary describes sub quantum hyperspace phenomena that enable and mediate our communion with extraterrestrials These reflections prompted Vary to muse that in this sense we are all extraterrestrials Our consciousness transcends the material and elevates and entwines our spirits My Universe A Transcendent Reality is a literary work with profound technological and teleological overtones Vary's prophetic prose poems combine physics

metaphysics cosmology theology and philosophy He offers extraordinary radical ideas that can expand our dominion over nature and promote self realization Vary's book differs from others of its genera because it presents a rational basis for understanding the transcendent reality that influences our lives and by which we can enhance our interpersonal relations and infinite potentials My Universe describes the foundation for perceiving a transcendent reality with quantum phenomena which we may experimentally observe as evidence of the intertwining of the transcendent and material From this foundation we may realize transcendent communications with extraterrestrial beings This is because there is a bond between transcendent reality and material reality between transcendent human consciousness and extraterrestrial reality which are seemingly separated only by a tenuous hyperspace interface that may be traversed by advanced human techniques Describes paradigms that enable and implement our transcendent consciousness and our relation to and contact with extraterrestrial worlds and beings Gives entertaining provocative clarification of great ideas in cosmology philosophy theology sociology evolution metaphysics and sub quantum physics Speaks to all cultures innovators writers poets artists scientists explains the nature of our world so that we may better apply our infinite potentials Promotes broadening of one's spiritual self realization challenging revolutionary transformational and inspiring needed in this crucial juncture of time Suggest transcendent control of nature through sub quantum phenomena and harnessing cold fusion power and changing lead to gold actually metaphorically Proclaims people may aspire to a personal paradise because no matter how bad life on Earth becomes everyone may prepare for access to a transcendent paradise

Reticulate Evolution Nathalie Gontier,2015-07-09 Written for non experts this volume introduces the mechanisms that underlie reticulate evolution Chapters are either accompanied with glossaries that explain new terminology

or timelines that position pioneering scholars and their major discoveries in their historical contexts. The contributing authors outline the history and original context of discovery of symbiosis symbiogenesis lateral gene transfer hybridization or divergence with gene flow and infectious heredity. By applying key insights from the areas of molecular phylogenetics, microbiology, virology, ecology, systematics, immunology, epidemiology and computational science they demonstrate how reticulate evolution impacts successful survival fitness and speciation. Reticulate evolution brings forth a challenge to the standard Neo Darwinian framework which defines life as the outcome of bifurcation and ramification patterns brought forth by the vertical mechanism of natural selection. Reticulate evolution puts forward a pattern in the tree of life that is characterized by horizontal mergings and lineage crossings induced by symbiosis symbiogenesis lateral gene transfer, hybridization or divergence with gene flow and infective heredity making the tree of life look more like a web of life. On an epistemological level the various means by which hereditary material can be transferred horizontally challenges our classic notions of units and levels of evolution fitness modes of transmission linearity communities and biological individuality. The case studies presented examine topics including the origin of the eukaryotic cell and its organelles through symbiogenesis, the origin of algae through primary and secondary symbiosis and dinoflagellates through tertiary symbiosis, the superorganism and holobiont as units of evolution, how endosymbiosis induces speciation in multicellular life forms, transferrable and non transferrable plasmids and how they symbiotically interact with their host, the means by which prokaryotic and eukaryotic organisms transfer genes laterally, bacterial transformation, transduction and conjugation as well as transposons and other mobile genetic elements, hybridization and divergence with gene flow in sexually reproducing individuals, current human microbiome and virome studies that impact our knowledge concerning the evolution of organismal health and acquired immunity and how symbiosis and symbiogenesis can be modelled in computational evolution.

[Spaces of Tolerance](#) Igea Troiani, Suzanne Ewing, 2021-03-28
Spaces of Tolerance addresses the topic of tolerance in architectural production. Through examining the boundaries of where discourses, practices and designs are considered publishable, suitable to be made public or not, the book exposes criteria and cultures which censor architecture so as to offer ways that architecture can be more inclusive and diverse for society at large. The contributors to the book discuss disciplinary tolerances and constraints related to architecture and its interdisciplinary exchanges and modes of working, physical, spatial, temporal and digital tolerance in material assemblages and production between drawing and building and social, cultural and political tolerance and threats contingent on geography and history. This timely book aims to look at extremities, margins and marginality to explore acceptable levels and their fluctuations in deviation and divergence. Chapters in the book involve ungendering, unacculturating in disciplinary terms and diversifying the architectural practitioner, writer, editor, reviewer and reader and retooling the instruments and tactics of architectural practice and theory. They argue that tolerance in interdisciplinary research in architecture can cultivate more diverse and productive conversations. The chapters in this book
