Symbolic Rewriting Techniques Progress In Computer Science And Applied Logic:

Rewriting Techniques and Applications, 1999 *Symbolic Rewriting Techniques* Manuel Bronstein, Johannes

Grabmeier, Volker Weispfenning, 2011-09-30 Symbolic rewriting techniques are methods for deriving consequences from systems of equations and are of great use when investigating the structure of the solutions Such techniques appear in many important areas of research within computer algebra the Knuth Bendix completion for groups monoids and general term rewriting systems the Buchberger algorithm for Gr bner bases the Ritt Wu characteristic set method for ordinary differential equations and the Riquier Janet method for partial differential equations This volume contains invited and contributed papers to the Symbolic Rewriting Techniques workshop which was held at the Centro Stefano Franscini in Ascona Switzerland from April 30 to May 4 1995 That workshop brought together 40 researchers from various areas of rewriting techniques the main goal being the investigation of common threads and methods Following the workshops each contribution was formally refereed and 14 papers were selected for publication **Computer Algebra in Scientific Computing** Viktor G.

Ganzha, Ernst W. Mayr, Evgenii V. Vorozhtsov, 2012-12-06 Proceedings of the Third Workshop on Computer Algebra in Scientific Computing Samarkand October 5-9 2000 **Number Theoretic Methods in Cryptography** Igor

Shparlinski, 2012-12-06 The book introduces new techniques which imply rigorous lower bounds on the complexity of some number theoretic and cryptographic problems These methods and techniques are based on bounds of character sums and numbers of solutions of some polynomial equations over finite fields and residue rings It also contains a number of open problems and proposals for further research We obtain several lower bounds exponential in terms of $\log p$ on the degrees and orders of polynomials algebraic functions Boolean functions linear recurring sequences coinciding with values of the discrete logarithm modulo a prime p at sufficiently many points the number of points can be as small as $p^{1/2}$ He These functions are considered over the residue ring modulo p and over the residue ring modulo an arbitrary divisor d of $p-1$ The case of $d=2$ is of special interest since it corresponds to the representation of the right most bit of the discrete logarithm and defines whether the argument is a quadratic residue We also obtain non trivial upper bounds on the degree sensitivity and Fourier coefficients of Boolean functions on bits of x deciding whether x is a quadratic residue These results are used to obtain lower bounds on the parallel arithmetic and Boolean complexity of computing the discrete logarithm For example we prove that any unbounded fan in Boolean circuit of sublogarithmic depth computing the discrete logarithm modulo p must be of superpolynomial size *Coding, Cryptography and Combinatorics* Keqin Feng, Harald Niederreiter, Chaoping

Xing, 2004-06-25 It has long been recognized that there are fascinating connections between coding theory cryptology and combinatorics Therefore it seemed desirable to us to organize a conference that brings together experts from these three areas for a fruitful exchange of ideas We decided on a venue in the Huang Shan Yellow Mountain region one of the most scenic areas of China so as to provide the additional inducement of an attractive location The conference was planned for

June 2003 with the official title Workshop on Coding Cryptography and Combinatorics CCC 2003 Those who are familiar with events in East Asia in the first half of 2003 can guess what happened in the end namely the conference had to be cancelled in the interest of the health of the participants The SARS epidemic posed too serious a threat At the time of the cancellation the organization of the conference was at an advanced stage all invited speakers had been selected and all abstracts of contributed talks had been screened by the program committee Thus it was decided to call on all invited speakers and presenters of accepted contributed talks to submit their manuscripts for publication in the present volume Altogether 39 submissions were received and subjected to another round of refereeing After careful scrutiny 28 papers were accepted for publication

Symbolic Rewriting Techniques Manuel Bronstein, Johannes Grabmeier, Volker Weispfenning, 1998 Symbolic rewriting techniques are methods for deriving consequences from systems of equations and are of great use when investigating the structure of the solutions Such techniques appear in many important areas of research within computer algebra the Knuth Bendix completion for groups monoids and general term rewriting systems the Buchberger algorithm for Gröbner bases the Ritt Wu characteristic set method for ordinary differential equations and the Riquier Janet method for partial differential equations This volume contains invited and contributed papers to the Symbolic Rewriting Techniques workshop which was held at the Centro Stefano Franscini in Ascona Switzerland from April 30 to May 4 1995 That workshop brought together 40 researchers from various areas of rewriting techniques the main goal being the investigation of common threads and methods Following the workshops each contribution was formally refereed and 14 papers were selected for publication

Cryptographic Applications of Analytic Number Theory Igor Shparlinski, 2013-03-07 The book introduces new techniques that imply rigorous lower bounds on the complexity of some number theoretic and cryptographic problems It also establishes certain attractive pseudorandom properties of various cryptographic primitives These methods and techniques are based on bounds of character sums and numbers of solutions of some polynomial equations over finite fields and residue rings Other number theoretic techniques such as sieve methods and lattice reduction algorithms are used as well The book also contains a number of open problems and proposals for further research The emphasis is on obtaining unconditional rigorously proved statements The bright side of this approach is that the results do not depend on any assumptions or conjectures On the downside the results are much weaker than those which are widely believed to be true We obtain several lower bounds exponential in terms of $\log p$ on the degrees and orders of polynomials of algebraic functions of Boolean functions of linear recurrence sequences coinciding with values of the discrete logarithm modulo a prime p at sufficiently many points the number of points can be as small as $p^{1/2}$ These functions are considered over the residue ring modulo p and over the residue ring modulo an arbitrary divisor d of $p-1$ The case of $d=2$ is of special interest since it corresponds to the representation of the rightmost bit of the discrete logarithm and defines whether the argument is a quadratic residue

Designing Reliable Distributed Systems Peter

Csaba Ölveczky, 2018-02-12 This classroom tested textbook provides an accessible introduction to the design formal modeling and analysis of distributed computer systems. The book uses Maude, a rewriting logic based language and simulation and model checking tool which offers a simple and intuitive modeling formalism that is suitable for modeling distributed systems in an attractive object oriented and functional programming style. Topics and features: introduces classical algebraic specification and term rewriting theory including reasoning about termination, confluence and equational properties; covers object oriented modeling of distributed systems using rewriting logic as well as temporal logic to specify requirements that a system should satisfy; provides a range of examples and case studies from different domains to help the reader to develop an intuitive understanding of distributed systems and their design challenges; examples include classic distributed systems such as transport protocols, cryptographic protocols and distributed transactions, leader election and mutual exclusion algorithms; contains a wealth of exercises including larger exercises suitable for course projects and supplies executable code and supplementary material at an associated website. This self contained textbook is designed to support undergraduate courses on formal methods and distributed systems and will prove invaluable to any student seeking a reader friendly introduction to formal specification logics and inference systems and automated model checking techniques. *Directory of Published*
