Synplify Premier User Guide:

Guide to FPGA Implementation of Arithmetic Functions Jean-Pierre Deschamps,Gustavo D. Sutter,Enrique Cantó,2012-04-02 This book is designed both for FPGA users interested in developing new specific components generally for reducing execution times and IP core designers interested in extending their catalog of specific components The main focus is circuit synthesis and the discussion shows for example how a given algorithm executing some complex function can be translated to a synthesizable circuit description as well as which are the best choices the designer can make to reduce the circuit cost latency or power consumption This is not a book on algorithms It is a book that shows how to translate efficiently an algorithm to a circuit using techniques such as parallelism pipeline loop unrolling and others Numerous examples of FPGA implementation are described throughout this book and the circuits are modeled in VHDL Complete and synthesizable source files are available for download   Low-Power Wireless Communication Circuits and Systems Kiat Seng Yeo,Kaixue Ma,2018-05-03 The increasing demand for extremely high data rate communications has urged researchers to develop new communication systems Currently wireless transmission with more than one Giga bits per second Gbps data rates is becoming essential due to increased connectivity between different portable and smart devices To realize Gbps data rates millimeter wave MMW bands around 60 GHz is attractive due to the availability of large bandwidth of 9 GHz Recent research work in the Gbps data rates around 60 GHz band has focused on short range indoor applications such as uncompressed video transfer high speed file transfer between electronic devices and communication to and from kiosk Many of these applications are limited to 10 m or less because of the huge free space path loss and oxygen absorption for 60 GHz band MMW signal This book introduces new knowledge and novel circuit techniques to design low power MMW circuits and systems It also focuses on unlocking the potential applications of the 60 GHz band for high speed outdoor applications The innovative design application significantly improves and enables high data rate low cost communication links between two access points seamlessly The 60 GHz transceiver system on chip provides an alternative solution to upgrade existing networks without introducing any building renovation or external network laying works   **SuperCalc 4** ,   **Fast Track User's Guide** ,1990
