**System Requirements Specification (Syrs) 2.0** Dr William S Chao, 2015-12-17 System requirements specification SyRS is in the systems development life cycle a result of the requirements and specifications phase That is a system requirements specification is for the analysts to find out what the customers indeed expect the system to do for them When working on the system requirements specification we only specify what this system is but never ask how this system shall be manufactured A system has been specified by system requirements specification SyRS 1.0 hopefully to be an integrated whole embodied in its assembled components their interactions with each other and the environment Since systems structure and systems behavior are the two most prominent views of a system integrating the systems structure and systems behavior apparently is the best way to achieve a truly integrated whole of a system Because system requirements specification 1.0 does not specify the integration of systems structure and systems behavior very likely it will never be able to actually form an integrated whole of a system Structure behavior coalescence SBC provides an elegant way to integrate the systems structure and systems behavior and hence achieves a truly integrated whole of a system A truly integrated whole sets a path to achieve the desired system requirements specification SyRS SBC facilitates an integrated whole Therefore we conclude that system requirements specification SyRS 2.0 using the SBC approach which contains three fundamental diagrams a architecture hierarchy diagram b component operation diagram and c interaction flow diagram is highly adequate in specifying a system

Requirements Using the Unified Process A Practical Approach presents an easy to apply methodology for creating requirements Learn to build user requirements requirements architecture and the specifications more quickly and at a lower cost The authors present realistic solutions for the entire requirements process gathering analysis specification and maintenance

System Requirements Engineering Pericles Loucopoulos,Vassilios Karakostas,1995 System Requirements Engineering presents a balanced view of the issues concepts models techniques and tools found in requirements engineering research and practice Requirements engineering is presented from business behavioural and software engineering perspectives and a general framework is established at the outset This book considers requirements engineering as a combination of three concurrent and interacting processes eliciting knowledge related to a problem domain ensuring the validity of such knowledge and specifying the problem in a formal way Particular emphasis is given to requirements elicitation techniques and there is a fully integrated treatment of the development of requirements specifications through enterprise modelling functional requirements and non functional requirements

A Unified Specification of Behavior for Requirements and Design ,2007 It would be useful to write one description of software behavior to serve both requirements and design Having one description could reduce effort by eliminating the work of developing two descriptions and keeping them consistent throughout development and maintenance It would also eliminate the inconsistency inherent in having two descriptions a fertile source of error A question paramount to software engineers is Could one description of behavior for a real system serve both requirements and design The purpose of the present document is to answer that question by producing one such description of the software behavior of a real system The specification presented here is based upon behavioral specifications extracted from function and abstract interface specifications developed by Paul Clements Alan Parker Kathryn Heninger Britton David Parnas John Shore Stuart Faulk Bruce Labaw and David Weiss
