Systemic Aspects of Innovation and Design Marzia Mortati, 2013-12-05 The book provides a snapshot of a hot topic the systemic nature of innovation and its relevance to design with a trifold perspective the academic level the literature on innovation studies and design is often neglected and a clear connection between the two topics taken for granted the research level collaborative models are currently considered great opportunities for transforming consumption production and distribution of goods but a clear scholarly discourse is still forming the political level the European Commission and the OECD are devoting much effort to understanding and measuring the impact of design in innovation processes and firms and a clear contribution would greatly support this path Thus the book provides an informed historical and nuanced perspective to the relationship between design and innovation to contribute to all three levels and to propose a point of view that goes beyond aesthetics and meanings

#### **Complementary Innovation in Platform-Centric Ecosystems. An Integrated View**

Konstantin Kugler, 2015-06-05 Master s Thesis from the year 2015 in the subject Business economics Business Management Corporate Governance grade 1 3 University of Mannheim language English abstract Managers in strategy and organization for innovation are increasingly confronted with the challenge to compete on the basis of complex technology platforms Prominent examples such as Microsoft Windows operating systems Google Internet search engines Facebook online social networks Sony PlayStation video game consoles Visa payment cards Wal Mart retail Tesla Motors electric cars or Life Technologies genome sequencing demonstrate that platforms are pervasive in many industries In fact platforms represent one of three configuration models through which firms innovate and generate value Thus platforms are both a mechanism for value creation through innovation and value capture through appropriation Their economic importance is substantial in terms of market value 60 of the 100 largest companies worldwide earn more than half of their income in platform markets The emergence of platforms reflects the growing interdependency between products and services and the increasing dispersion of innovation activities among many different actors especially in rapidly evolving high tech industries It has been widely acknowledged in management theory and practice that in order to successfully commercialize innovations and create value for end users platforms have to be embedded in an interrelated array of organizations including suppliers complementors customers competitors and institutions Thereby platforms constitute the foundation upon which a vast and diverse web of firms commonly defined as a business ecosystem develop and provide complementary products and services

While the question of how platform owners can stimulate R D activities by complementors has been tackled in the academic literature and evolved to a promising research field a coherent concept of the managerial levers is still missing This motivates the following research question What firm level and industry level determinants of platform centric ecosystems encourage or impede complementary innovation by third party organizations Accordingly the main objective of this thesis is to conceptualize an integrated view of the defining elements of platform ecosystems and their implications for the innovation orientation of complementors In addition this thesis aims to test and build on the proposed theoretical framework empirically by investigating the high tech industry platform ecosystems of Amazon Web Services AWS and Advanced RISC Machines ARM
