## The Theory Of Jacobi Forms Progress In Mathematics:

**The Theory of Jacobi Forms** Martin Eichler, Don Zagier, 2013-12-14 The functions studied in this monograph are a cross between elliptic functions and modular forms in one variable. Specifically we define a Jacobi form on  $SL_2$  to be a holomorphic function  $f$  on the upper half plane satisfying the transformation equations  $f\left(\frac{az+b}{cz+d}\right) = e^{2\pi i k \frac{cz+d}{cz+d}} f(z)$  and having a Fourier expansion of the form  $\sum_{n \geq 0} c(n) e^{2\pi i n \tau}$ . Here  $k$  and  $m$  are natural numbers called the weight and index of  $f$  respectively. Note that the function  $f$  is an ordinary modular form of weight  $k$  while for fixed  $T$  the function  $z \mapsto f(z, \tau)$  is a function of the type normally used to embed the elliptic curve  $T$  into a projective space. If  $m = 0$  then  $f$  is independent of  $z$  and the definition reduces to the usual notion of modular forms in one variable. We give three other examples of situations where functions satisfying (1.3) arise classically: 1. Theta series. Let  $Q$  be a positive definite integer valued quadratic form and  $B$  the associated bilinear form. Geometry and Analysis on Manifolds

Takushiro Ochiai, Toshiki Mabuchi, Yoshiaki Maeda, Junjiro Noguchi, Alan Weinstein, 2015-02-25 This volume is dedicated to the memory of Shoshichi Kobayashi and gathers contributions from distinguished researchers working on topics close to his research areas. The book is organized into three parts with the first part presenting an overview of Professor Shoshichi Kobayashi's career. This is followed by two expository course lectures: the second part on recent topics in extremal Kähler metrics and value distribution theory which will be helpful for graduate students in mathematics interested in new topics in complex geometry and complex analysis. Lastly the third part of the volume collects authoritative research papers on differential geometry and complex analysis. Professor Shoshichi Kobayashi was a recognized international leader in the areas of differential and complex geometry. He contributed crucial ideas that are still considered fundamental in these fields. The book will be of interest to researchers in the fields of differential geometry, complex geometry and several complex variables geometry as well as to graduate students in mathematics. **Geometry of Moduli**

Jan Arthur Christophersen, Kristian Ranestad, 2018-11-24 The proceedings from the Abel Symposium on Geometry of Moduli held at Svinøya Rorbuer Svolvær in Lofoten in August 2017 present both survey and research articles on the recent surge of developments in understanding moduli problems in algebraic geometry. Written by many of the main contributors to this evolving subject the book provides a comprehensive collection of new methods and the various directions in which moduli theory is advancing. These include the geometry of moduli spaces, non-reductive geometric invariant theory, birational geometry, enumerative geometry, hyperkähler geometry, syzygies of curves and Brill-Noether theory and stability conditions. Moduli theory is ubiquitous in algebraic geometry and this is reflected in the list of moduli spaces addressed in this volume: sheaves on varieties, symmetric tensors, abelian differentials, log Calabi-Yau varieties, points on schemes, rational varieties, curves, abelian varieties and hyperkähler manifolds. *Automorphic Forms and Related Topics*

Samuele Anni, Jay Jorgenson, Lejla Smajlović, Lynne Walling, 2019-06-19 This volume contains the proceedings of the Building Bridges 3rd EU-US Summer School and Workshop on Automorphic

Forms and Related Topics which was held in Sarajevo from July 11-22, 2016. The articles summarize material which was presented during the lectures and speed talks during the workshop. These articles address various aspects of the theory of automorphic forms and its relations with the theory of L functions, the theory of elliptic curves and representation theory. In addition to mathematical content, the workshop held a panel discussion on diversity and inclusion which was chaired by a social scientist who has contributed to this volume as well. This volume is intended for researchers interested in expanding their own areas of focus, thus allowing them to build bridges to mathematical questions in other fields.

*Geometric Methods in Physics* Piotr Kielanowski, S. Twareque Ali, Alexander Odesskii, Anatol Odziejewicz, Martin Schlichenmaier, Theodore Voronov, 2013-07-30. The Biaowie workshops on Geometric Methods in Physics taking place in the unique environment of the Biaowie natural forest in Poland are among the important meetings in the field. Every year some 80 to 100 participants both from mathematics and physics join to discuss new developments and to interchange ideas. The current volume was produced on the occasion of the XXXI meeting in 2012. For the first time the workshop was followed by a School on Geometry and Physics which consisted of advanced lectures for graduate students and young researchers. Selected speakers of the workshop were asked to contribute and additional review articles were added. The selection shows that despite its now long tradition the workshop remains always at the cutting edge of ongoing research. The XXXI workshop had as a special topic the works of the late Boris Vasilievich Fedosov, 1938-2011, who is best known for a simple and very natural construction of a deformation quantization for any symplectic manifold and for his contributions to index theory.

**Canadian Journal of Mathematics**, 1995-12. **Geometric Methods in Physics XXXVI** Piotr Kielanowski, Anatol Odziejewicz, Emma Previato, 2019-03-11. This book collects papers based on the XXXVI Biaowie Workshop on Geometric Methods in Physics, 2017. The Workshop, which attracts a community of experts active at the crossroads of mathematics and physics, represents a major annual event in the field. Based on presentations given at the Workshop, the papers gathered here are previously unpublished, at the cutting edge of current research, and primarily grounded in geometry and analysis with applications to classical and quantum physics. In addition, a Special Session was dedicated to S. Twareque Ali, a distinguished mathematical physicist at Concordia University, Montreal, who passed away in January 2016. For the past six years, the Biaowie Workshops have been complemented by a School on Geometry and Physics comprising a series of advanced lectures for graduate students and early career researchers. The extended abstracts of this year's lecture series are also included here. The unique character of the Workshop and School series is due in part to the venue, a famous historical, cultural, and environmental site in the Biaowie forest, a UNESCO World Heritage Centre in eastern Poland. Lectures are given in the Nature and Forest Museum, and local traditions are interwoven with the scientific activities.

**Current Developments in Mathematics**, 1996. Proceedings on Moonshine and Related Topics John McKay, 2001. This volume contains the proceedings of the Moonshine workshop held at the Centre de Recherches Mathématiques (CRM) in Montreal. In this volume, all the classical Moonshine

themes are presented namely the Monster simple group and other finite groups automorphic functions and forms and related congruence groups and vertex algebras and their representations These topics appear in either a pure form or in a blend of algebraic geometry dealing with algebraic surfaces Picard Fuchs equations and hypergeometric functions     **Proceedings**

Maruyoshi, Takahiro Nishinaka, Takeshi Oota, Kazuhiro Sakai, Asato Tsuchiya, Reiji Yoshioka, 2022-06-06 This volume contains the proceedings of the East Asia Joint Symposium on Fields and Strings 2021 held at the Media Center of Osaka City

University on November 22-27, 2021. About 160 physicists from all over East Asia attended physically or joined online this symposium and more than 50 researchers presented their results in the invited lectures, the short talks or the poster session. Quantum field theory and string theory in the context of several exciting developments were discussed which include frontiers of supersymmetric gauge theory anomalies and higher form symmetries and several issues on quantum gravity and black holes     **Mirror Symmetry IV** Eric D'Hoker, 2002 This book presents contributions of participants of a workshop held at the Centre de Recherches Mathématiques CRM, University of Montreal. It can be viewed as a sequel to Mirror Symmetry I (1998), Mirror Symmetry II (1996) and Mirror Symmetry III (1999) copublished by the AMS and International Press. The volume presents a broad survey of many of the noteworthy developments that have taken place in string theory, geometry and duality since the mid 1990s. Some of the topics emphasized include the following: Integrable models and supersymmetric gauge theories, theory of M and D branes and noncommutative geometry, duality between strings and gauge theories and elliptic genera and automorphic forms. Several introductory articles present an overview of the geometric and physical aspects of mirror symmetry and of corresponding developments in symplectic geometry. The book provides an efficient way for a very broad audience of mathematicians and physicists to explore the frontiers of research into this rapidly expanding area.
