Intermediate Typewriting Studies William Ernest Harned, 1927 **Famous Composers and Their Works** John Knowles Paine, Theodore Thomas, Karl Klauser, 1909 *SYMMETRIC KEY CRYPTOGRAPHY WITH PYTHON AND TKINTER* Vivian Siahaan, Rismon Hasiholan Sianipar, 2024-08-24

In the evolving landscape of data security encryption algorithms play a crucial role in safeguarding sensitive information This book delves into several prominent encryption algorithms including AES DES 3DES Blowfish and CAST Each algorithm offers unique strengths and is suitable for different use cases Advanced Encryption Standard AES stands out for its robust security and efficiency making it a preferred choice for many modern applications Data Encryption Standard DES while historically significant has largely been replaced by Triple DES 3DES which enhances DES's security by applying it multiple times Blowfish a versatile and fast cipher and CAST known for its flexibility in key lengths are also explored for their practical applications in various security scenarios To provide a hands on approach this book includes detailed Python examples and Tkinter based graphical user interfaces for each encryption algorithm These practical examples illustrate how to implement these ciphers in real world applications from basic encryption and decryption processes to more complex use cases involving secure data handling and user interaction Through these examples readers will gain a comprehensive understanding of both the theoretical and practical aspects of encryption empowering them to implement secure solutions tailored to their specific needs In chapter two we discussed the development of a Tkinter based GUI application for AES encryption and decryption of synthetic data The application consists of multiple tabs one for displaying original data one for showing encrypted data another for decrypted data and a fourth for entering and managing passwords Key functionalities include generating a synthetic dataset with various attributes like UserID Name and Email encrypting and decrypting this data using AES encryption in GCM mode and displaying the results in a ttk Treeview The application also features password management allowing users to set a password generate an encryption key from it and update the displays accordingly The code includes several methods for data encryption and decryption key derivation and DataFrame management The `generate_data_intelligence_dataset` method creates synthetic data while `encrypt_data` and `decrypt_data` methods handle AES encryption and decryption The `update_displays` method updates the DataFrame with encrypted and decrypted data and saves these to Excel files The `display_dataframe` method dynamically displays DataFrames in the Tkinter GUI with alternating row colors for better readability This session detailed how each part of the code contributes to creating a rich and interactive application for handling encrypted data In chapter three we explored a detailed Tkinter application designed for managing and visualizing Bitcoin transaction data The application generates synthetic data including wallet addresses transaction types dates Bitcoin amounts and their USD equivalents Users enter an 8 byte DES key to encrypt Bitcoin amounts using DES encryption The encrypted data is displayed in a tab within the Tkinter GUI and users can view a histogram showing the distribution of Bitcoin amounts both before and

after encryption The application leverages various Python libraries tkinter for the GUI pandas for data manipulation Crypto Cipher DES for encryption and matplotlib for plotting Key functions include generating synthetic Bitcoin data encrypting data with DES and visualizing data distributions The GUI is structured with tabs for entering the password viewing original and encrypted data and displaying distribution graphs The session detailed how each function works from generating Bitcoin addresses and transaction data to encrypting and decrypting data and plotting results In chapter four we discussed a Python code that integrates a Tkinter GUI with Triple DES 3DES encryption and SQLite database management The code encompasses the setup of an SQLite database encryption and decryption of transaction data using 3DES and functions for saving and retrieving encrypted transaction records Key functions include generating a 3DES key encrypting and decrypting data with appropriate padding and handling database operations with retry logic to manage potential locking issues We explored the database setup with table creation and transaction management and incorporated robust error handling to ensure reliable operation The GUI implementation leverages Tkinter for user interaction and display including functions to generate 3DES keys handle encryption decryption operations and manage transaction records in an SQLite database The session covered detailed explanations of how each part of the code operates from database setup and key generation to data encryption decryption and transaction storage This comprehensive approach ensures secure handling of sensitive data and integrates encryption functionalities within a user friendly interface demonstrating practical applications of cryptographic techniques in a real world scenario In chapter five we detailed a Python script using Tkinter for a secure cloud storage application leveraging Blowfish encryption The script includes several core functionalities user authentication file upload and download and cryptographic operations Key aspects include helper functions for generating and verifying HMACs as well as Blowfish encryption and decryption The GUI is organized into tabs for user login register file upload file download and logs Functions are defined to handle file selection encryption upload HMAC generation and downloading ensuring that data integrity is maintained through HMAC verification and secure file handling The Tkinter based GUI is designed to provide a user friendly interface for interacting with the secure cloud storage system The SecureCloudStorageApp class initializes and configures the GUI with tabs for different functionalities It manages user login registration file selection and storage operations The application supports encryption and decryption of files storing encrypted data and HMACs and provides feedback through a log and message boxes This setup ensures secure data handling and user management integrating cryptographic functions seamlessly into a functional application interface In chapter six we discussed and refined a Python script for managing file encryption and decryption using the CAST cipher implemented with a Tkinter graphical user interface GUI The script includes functions for generating encryption keys encrypting and decrypting files and handling file uploads and downloads It also features user authentication and registration mechanisms utilizing bcrypt for password hashing and checking The GUI allows users to perform these actions through a series of buttons and input fields with status

updates and error messages displayed in a scrollable text area We further improved the script by adding error handling for file operations and ensuring proper file path management Enhancements included better user feedback through message boxes for errors related to file reading JSON decoding and user actions These improvements aimed to make the application more robust and user friendly ensuring reliable file management and secure encryption practices The final version also addressed exceptions and edge cases to enhance the overall reliability and functionality of the Tkinter based application
