Virtual Testing and Predictive Modeling Bahram Farahmand, 2009-06-29 The materials used in manufacturing the aerospace aircraft automobile and nuclear parts have inherent flaws that may grow under fluctuating load environments during the operational phase of the structural hardware. The design philosophy, material selection, analysis, approach, testing, quality control, inspection, and manufacturing are key elements that can contribute to failure prevention and assure a trouble-free structure. To have a robust structure, it must be designed to withstand the environmental load throughout its service life, even when the structure has pre-existing flaws or when a part of the structure has already failed. If the design philosophy of the structure is based on the fail-safe requirements or multiple load path design, partial failure of a structural component due to crack propagation is localized and safely contained or arrested. For that reason, proper inspection techniques must be scheduled for reusable parts to detect the amount and rate of crack growth and the possible need for repairing or replacement of the part. An example of a fail-safe designed structure with crack arrest features common to all aircraft structural parts is the skin-stiffened design configuration. However, in other cases, the design philosophy has safe life or single load path features where analysts must demonstrate that parts have adequate life during their service operation and the possibility of catastrophic failure is remote. For example, all pressurized vessels that have single load path features are classified as high-risk parts. During their service operation, these tanks may develop cracks which will grow gradually in a stable manner. *Topics in Modal Analysis, Volume 10* Michael Mains, 2025-08-07 *Topics in Modal Analysis Volume 10* Proceedings of the 33rd IMAC A Conference and Exposition on Structural Dynamics 2015 the tenth volume of ten from the Conference brings together contributions to this important area of research and engineering.
