*Combinatorial Inference in Geometric Data Analysis* Brigitte Le Roux, Solène Bienaise, Jean-Luc Durand, 2019-03-20

Geometric Data Analysis designates the approach of Multivariate Statistics that conceptualizes the set of observations as a Euclidean cloud of points Combinatorial Inference in Geometric Data Analysis gives an overview of multidimensional statistical inference methods applicable to clouds of points that make no assumption on the process of generating data or distributions and that are not based on random modelling but on permutation procedures recasting in a combinatorial framework It focuses particularly on the comparison of a group of observations to a reference population combinatorial test or to a reference value of a location parameter geometric test and on problems of homogeneity that is the comparison of several groups for two basic designs These methods involve the use of combinatorial procedures to build a reference set in which we place the data The chosen test statistics lead to original extensions such as the geometric interpretation of the observed level and the construction of a compatibility region Features Defines precisely the object under study in the context of multidimensional procedures that is clouds of points Presents combinatorial tests and related computations with R and Coheris SPAD software Includes four original case studies to illustrate application of the tests Includes necessary mathematical background to ensure it is self contained This book is suitable for researchers and students of multivariate statistics as well as applied researchers of various scientific disciplines It could be used for a specialized course taught at either master or PhD level

**Data Science Foundations** Fionn Murtagh, 2017-09-22 Data Science Foundations is most welcome and indeed a piece of literature that the field is very much in need of quite different from most data analytics texts which largely ignore foundational concepts and simply present a cookbook of methods a very useful text and I would certainly use it in my teaching Mark Girolami Warwick University Data Science encompasses the traditional disciplines of mathematics statistics data analysis machine learning and pattern recognition This book is designed to provide a new framework for Data Science based on a solid foundation in mathematics and computational science It is written in an accessible style for readers who are engaged with the subject but not necessarily experts in all aspects It includes a wide range of case studies from diverse fields and seeks to inspire and motivate the reader with respect to data associated information and derived knowledge
