The engines are inline, four-cylinder, four-stroke diesel engines with overhead valves. They are of the direct-injection type and have thermostatically controlled water cooling of the cylinder block and cylinder head.

The engines have wet-liner, replaceable cylinder liners and two separate cylinder heads, each of which covers three cylinders. The cylinder heads are mutually interchangeable.

Lubrication takes place through a forced-feed system where an oil pump delivers oil to all lubricating points.

The turbocharger supplies the engine with fresh air under pressure, providing excess air. This means that the fuel injection quantity can be increased, thereby giving increased engine output. The turbocharger is lubricated and cooled by the engine lubrication oil and is driven by the engine exhaust gases, thereby making use of otherwise wasted energy.
