the future challenges still facing this exciting and dynamic field **Modeling Semantic Web Services** Jos de Bruijn,Mick Kerrigan,Uwe Keller,Holger Lausen,James Scicluna,2008-05-11 Semantic Web services promise to automate tasks such as discovery mediation selection composition and invocation of services enabling fully flexible automated e business Their usage however still requires a significant amount of human intervention due to the lack of support for a machine processable description In this book Jos de Bruijn and his coauthors lay the foundations for understanding the requirements that shape the description of the various aspects related to Semantic Web services such as the static background knowledge in the form of ontologies the functional description of the service and the behavioral description of the service They introduce the Web Service Modeling Language WSML which provides means for describing the functionality and behavior of Web services as well as the underlying business knowledge in the form of ontologies with a conceptual grounding in the Web Service Modeling Ontology Academic and industrial researchers as well as professionals will find a comprehensive overview of the concepts and challenges in the area of Semantic Web services the Web Services Modeling Language and its relation to the Web Services Modeling Ontology and an in depth treatment of both enabling technologies and theoretical foundations
