Visualization Engineering Design Graphics With Augmented Reality:

Visualization and Engineering Design Graphics with Augmented Reality Jorge Dorribo Camba, Jeffrey Otey, Manuel Contero, Mariano Alcañiz, 2012 Visualization and Engineering Design Graphics with Augmented Reality is designed as a learning tool to help the aspiring engineer learn the language of engineering graphics. In this regard this book is hardly unique as there have been literally hundreds of books published in the past that had a similar goal. The main challenge faced by engineering graphics books comes from the difficulty of representing and describing three dimensional information on paper which is a consequence of the two dimensional nature of printed materials. What makes this book invaluable is the use of Augmented Reality a technology that will allow you to escape the limitations of traditional materials enabling you the student to truly visualize the objects being described in full 3D. To take full advantage of this book you will need a computer with the software provided and a web camera. Many parts of the book are linked to specific augmented reality content through a series of black and white marks that have been seamlessly integrated throughout the pages. In order to experience the content your camera must be pointed at these marks. The main mark available at the beginning of the book is used to interact with the augmented reality models which will be rendered in real time in your computer screen. If you do not have a webcam connected to your computer SolidWorks files of the models used throughout the book are included on the CD. In addition STL files have been provided so the models can be opened using your solid modeling CAD package of choice or printed on a 3D printer.

Visualization and Engineering Design Graphics with Augmented Reality, 2018-05 Engineering graphics EG is concerned of exchanging information from design into manufacture. In augmented reality AR product design applies the technology facilitate designers and architects to more accurately and more cost efficiently experiment with products before assigning to a production run or full manufacture. AR renders digital data from engineering data management repositories as spatially referenced 3D models. This enables 3D previews of products or projects during development proof of concept and prototyping phases. 3D visualization is key elements in most scientific and technical disciplines. In engineering education the development of spatial abilities has been acknowledge by many authors as a factor that is strongly related to higher level reasoning skills critical thinking creativity and success in science technology engineering and mathematics fields. This is particularly useful for soliciting feedback from users or other stakeholders before making the final manufacturing construction investment. In product design augmented reality may utilize a number of technologies for authoring detection recognition and rendering. This volume Visualization and Engineering Design Graphics with Augmented Reality is a comprehensive learning tool to help the engineers learn the language of engineering graphics. It deals with engineering graphics and The focused topics are scalable and modular augmented reality template for rapid development of engineering visualizations high precision vision based mobile augmented reality system for context aware architectural engineering construction formwork application optimization by using augmented reality.
