### Physical Maps

Physical maps show the natural features of a place. These include mountains, rivers, lakes, and oceans. They use colors and shading to show elevation and landforms. For example, green color represents lowlands, while brown and white show high mountains and high elevations. Physical maps help us understand the landscape and geography of a region.

### Political Maps

Political maps show boundaries between countries, states, and cities. These maps highlight human-made features such as capitals, major cities, and borders. Each nation is usually shaded with a different color to distinguish it from its neighbors. These maps are useful for understanding how land is divided by governments and international agreements.
