In retail, AIoT enhances customer engagement, optimizes supply chains and improves demand forecasting, leading to greater efficiency and competitiveness. Beyond retail, AIoT is driving innovation in smart services, public administration and urban planning, contributing to the development of sustainable smart cities. However, its implementation raises challenges such as data privacy, organizational adaptability and the need for regulatory frameworks. As AIoT continues to evolve, its impact on business models, consumer behavior and service efficiency will shape the future of global industries. **Artificial Intelligence of Things (AIoT) for Retail and Services Management** expands the knowledge and empirical research about the fusion of AI and IoT in the context of retail and services management in both public and private sectors.
